

## **New issue of Geistlich News out now!**

**Outstanding experts, once again, shed light on the key topics in regenerative dentistry. A few highlights from the current issue of Geistlich News.**

Bone augmentations this time take centre stage. While **Daniel Buser** presents a long-term follow-up to a lateral augmentation case, **Matteo Chiapasco** illustrates ideal combinations of autogenous bone and bone substitutes for various augmentation procedures, **Christer Dahlin** looks into the future of Guided Bone Regeneration (GBR), **Reinhard Gruber** provides fresh insight into the role of blood vessels for GBR and **Jan Lindhe** has a retrospective on the early days of regenerative dentistry. Last but not least, **Michael McGuire** emphasises the importance of Patient-Reported Outcomes for regenerative dentistry.

In addition, **Paul Buxton**, cell research group leader at Geistlich Pharma, explains how cells can help to evaluate a biomaterial and how a sound understanding of the cellular events during bone and soft-tissue regeneration can lead to new product developments.

Furthermore, the Osteology Foundation presents its new online communication platform THE BOX following its launch at the International Osteology Symposium in Monaco.
