

Passionate
about **quality!**

Passionate about **quality!**

3M ESPE AG, located in Seefeld, near Munich, develops, produces and markets more than 2,000 dental products for innovative dentistry. Thereby, a top-class quality is achieved through strict controls during the whole process which are conducted by highly skilled employees: the evaluation of the customer desires, the acquisition of raw materials and the selection of suppliers in every single step of production until the completion of the final product. As a part of a real multi-technology company, we possess the knowhow, experience and options necessary to successfully implement new, future-oriented product ideas which are in line with current research findings as well as practice requirements.

In this way, RelyX™ Unicem 2 Automix Self-Adhesive Resin Cement, for example, enables a comfortable and efficient workflow, because adhesive cementation of indirect restorations becomes possible in no more than five work steps. The best prerequisites to achieve high-end aesthetics are offered e. g. by Filtek™ Supreme XTE Universal Restorative with its large number of different shades and opacities, unsurpassed polish retention and optimized fluorescence characteristics. Highest precision during impression taking is achieved not only in the conventional way, with the product family of Impregum™ Penta™ Impression Materials, amongst others, but also with the Lava™ Chairside Oral Scanner C.O.S. for digital precision impressions.

In order to provide the best possible solutions for you and your patients – bearing in mind the specific requirements during everyday work – we consider ourselves to be a solution provider offering a whole range of high-quality dental products from one single source. The practicability and reliability of our materials and devices is achieved by implementing especially easy use while at the same time providing for aesthetic and precise results. In short, we are passionate about quality.

Dieter Klasmeier

Marketing Communications Operations Manager EMEA

Our new highlights!

Experience dental advance.

When it comes to innovation and progress we never rest. So again you may look forward to a variety of newly developed products and substantial improvements by 3M ESPE. Because we are passionate about quality, this is and will be our most important goal.

Impregum™ Intra-oral Syringe

Clinpro™ Cario L-Pop™

Lactic Acid Indicator Swabs

Clinpro™ Cario L-Pop™ is a speedy biochemical test conducted chairside, it provides a reliable diagnosis of the individual caries potential in just a few minutes.

Indications

- Supports diagnosis and monitoring of caries potential prevailing in individual's mouth
- Suitable to monitor the treatment success of oral care products to preserve and establish an oral microflora with low active caries bacteria
- Scores indicate the actual caries potential prevailing in the oral micro-flora

Product Benefits

The test detects the metabolic activity of caries-causing bacteria in the oral flora, on the basis of the rate of lactic acid formation.

- Monitoring of achieved lowering caries risk
- Motivates patients by immediately showing the outcome of professional preventive care
- Appropriate for patients of any age

Introductory Kit Clinpro™ Cario L-Pop™

Item No.	Product Information
47055	Introductory Kit 20 Clinpro Cario L-Pop, 20 Indicator Swabs, 1 Coloured Evaluation Chart
47056	Refill Pack 40 Clinpro Cario L-Pop, 40 Indicator Swabs, 1 Coloured Evaluation Chart

Clinpro™ Prophy Powder

Airpolish Powder for Sub- and Supragingival Usage

Clinpro™ Prophy Powder represents a unique innovation in air-polish technology and periodontal treatment. It removes pathogenic bacteria in the periodontal pockets more effectively than conventional plaque removal procedures.

Indications

- Safe removal of sub- and supragingival plaque during routine professional tooth cleaning
- Safe removal of plaque and stains on root/dentine surfaces
- Effective bacterial reduction in the periodontal pockets in addition to subgingival scaling during initial periodontal treatment or during supportive periodontal therapy (Recall)
- Easy and safe removal of extrinsic stains
- Safe professional cleaning of orthodontic braces

Product Benefits

- Effective bacterial reduction in periodontal pockets during clinical maintenance
- Minimal abrasion of enamel and dentin surfaces
- Significantly reduced treatment time compared to manual scaling procedures

Clinpro™ Prophy Powder Bottles

Item No.	Product Information
67001	4 Bottles, 100 g each

Clinpro™ Prophy Paste

Prophylaxis Polishing Paste

Clinpro™ Prophy Paste contains pumice and is available in three different grits; fine, medium and coarse, meaning the dental hygienist can select the right grit for optimal cleaning and abrasion in every situation.

Indications

- For use in cleaning and polishing procedures, as part of a professionally administrated prophylaxis treatment

Product Benefits

- Specially formulated paste to minimise splattering during polishing
- Three different grits for the right choice in abrasion management, and available in mint (medium and coarse) or cherry (fine) flavour
- Releases fluoride during polishing procedure, to help strengthen teeth and reduce sensitivity

Clinpro™ Prophy Paste Unit-Dose

Item No.	Product Information
12613	200 Unit-Dose, 2 g each, Fine, Cherry
12657	200 Unit-Dose, 2 g each, Medium, Mint
12658	200 Unit-Dose, 2 g each, Coarse, Mint

Clinpro™ White Varnish

Desensitizing Varnish

Clinpro™ White Varnish with TCP (Tri-Calcium Phosphate) is a proprietary formula that contains fluoride, calcium and phosphate-components naturally found in saliva.

Indications

- Treatment or prevention of hypersensitive teeth (dentine or enamel)

Product Benefits

- Flows better and reaches areas traditional varnishes may miss
- Delivers more fluoride
- Occludes Tubules

Clinpro™ White Varnish Unit-Dose

Item No.	Product Information
12249	50 Unit-Dose, 0.5 ml each, incl. Applicator Brushes in individual foil pouches, Flavor Mint, 1 Patient Pad, 60 Dosage Stickers, Technique Card
12250	100 Unit-Dose, 0.5ml each, incl. Applicator Brushes in individual foil pouches, Flavor Mint, 2 Patient Pads, 100 Dosage Stickers, Technique Card

Clinpro™ Sealant

Fissure Sealant

Clinpro™ Sealant is a light-cure, low viscosity, fluoride releasing pit and fissure sealant with a unique patented colour change feature.

Indications

- Effective protection for the early prevention of caries in enamel pit and fissures

Product Benefits

Clinpro™ Sealant is pink when applied to the tooth surface, and changes to an opaque off white colour when exposed to light. The pink color helps the dental professional with the accuracy and amount of material placed during the sealant procedure.

- Colour-change technology to visualise placement
- Contains and releases fluoride
- Long-lasting protection against caries

Zaris™ White & Brite

Tooth Whitening System

Zaris™ White & Brite is an in-office and at-home tooth whitening system that allows an easy way to a brighter smile.

Indications

Zaris™ White & Brite works by neutralising tooth discoloration. As soon as the agent – carbamide peroxide – is activated, oxygen permeates the enamel and reacts with the underlying coloured substances, thus inducing a bleaching effect. This results in whiter and more natural looking teeth.

We recommend bleaching only when the patient meets the following conditions:

- Good oral hygiene
- Healthy gums
- Free of caries
- No anterior restorations

Product Benefits

- Simplified tray-technique
- Available in three concentrations (in-office and at-home)
- Calibrated syringes to avoid dispensing excess gel

Zaris™ White & Brite Syringes

Glass Ionomer Filling Materials from 3M ESPE

3M ESPE has been developing glass ionomer materials for dentistry throughout the past 30 years. Building on this experience the company has continuously optimized its portfolio to offer a complete line of glass ionomers so you will always find a restorative that fits your specific procedural needs. No matter whether you are looking for a metal-reinforced, a resin-modified or a conventional glass ionomer restorative, and irrespective of whether you are planning to restore a molar or an incisor, and prefer automatic or hand mixing, Ketac™ and other products families by 3M ESPE will offer you a material with the desired properties.

Ketac™ Bond / Aplicap™™

Glass Ionomer Base Material

Ketac™ Bond is a radiopaque glass ionomer base material in handmix version or in the Aplicap™ System from 3M ESPE.

Indications

- Base material for sandwich technique
- Cavity lining
- Extended fissure sealing

Product Benefits

- High radiopacity
- High fluoride release
- The Aplicap™ System offers simple handling, constant working properties and reliable quality

Refill Ketac™ Bond Aplicap

Vitrebond™ Plus

Light-Cure Glass Ionomer Liner/Base

Vitrebond™ Plus offers excellent protection and accurate dispensing with its convenient new paste-liquid formula.

Indications

Cavity liner under composite, amalgam, metal and ceramic restorations, i.e.

- Direct anterior and posterior restorations (Classes I, II, III, IV and V)
- Indirect inlays, onlays and veneers
- Sandwich technique

Product Benefits

- Accurate, mess-free dispensing, with no additional hardware required. Click, mix and use.
- Low micro-leakage (comparable to original Vitrebond™ liner/base) – reduces post-op sensitivity
- Reduces the effect of polymerization shrinkage

Single Pack Vitrebond™ Plus

Item No.	Product Information
7571	Single Pack 1 Clicker 10 g, 1 Mixing Pad
7572	Double Pack 2 Clickers 10 g each, 1 Mixing Pad

Ketac™ Molar

Glass Ionomer Restorative Material

For decades, 3M™ ESPE™ has been the trailblazer in the glass ionomer success story. Ketac™ Molar provides excellent results with little effort for many indications.

Indications

- Single-surface fillings in posterior areas
- Core build-ups
- Primary teeth fillings (as amalgam substitute)
- Cervical fillings in posterior region
- Minimally Invasive Dentistry (MID)
- Base material for single- and multiple-surface composite fillings

Product Benefits

- Excellent mechanical properties for posterior teeth
- Bulk-fill convenience
- Ketac™ Molar Quick Aplicap™ – for fast setting posterior restoration

Ketac™ Fil Plus / Aplicap™

Glass Ionomer Filling Material

Ketac™ Fil Plus Glass Ionomer Filling Material is available in a handmix version or in the convenient Aplicap™ System, which offers simple handling, constant working properties and reliable quality.

Indications

- Permanent class III and V restorations
- Permanent class I small restorations
- Primary teeth fillings
- Fissure sealing
- Fillings of cervical erosions
- Fillings prior to crown preparation

Product Benefits

- 8 shades to achieve natural aesthetics
- Expansion coefficient similar to tooth structure
- Radiopaque
- High fluoride release
- Reduces risk of secondary caries due to fluoride release

Photac™ Fil Quick Aplicap™

Light-Curing Glass Ionomer Restorative Material

Treatment with Photac™ Fil Quick Aplicap™, means making a perfect glass ionomer filling with just a few quick steps.

Indications

- Primary teeth restorations
- Permanent Class III and V restorations
- Permanent small Class I restorations
- Semi-permanent Class I and II restorations
- Fissure sealing

Product Benefits

- Quick and easy to use, especially with impatient children or anxious patients
- High fluoride release protects against secondary caries

Core Build-up/Restorative

Vitremer™ is a glass ionomer core build-up and restorative material with patented Triple Curing Technology.

Indications

- Core build-ups prior crown placement
- Filling undercuttings in preparation of crowns
- Class I and II restorations in primary teeth
- Permanent class III and V restorations
- Restauration of root caries lesions
- Cavity lining

Product Benefits

- Patented triple curing technology: Light-curing, chemical curing and additive glass ionomer setting reaction
- Highly aesthetic due to 7 standard and 2 special shades
- Low abrasion
- High fluoride release

Ketac™ Silver / Aplicap™ / Maxicap™

Silver Reinforced Glass Ionomer Restorative Material

Ketac Silver restorative is available in a convenient Aplicap™ or Maxicap™ delivery for core build-ups, small posterior and primary tooth restorations.

Indications

- Core build-ups prior crown placement
- Permanent class I and V restorations
- Primary teeth fillings

Product Benefits

- Good thermal and electrical insulating properties
- Silver particles are sintered into the glass
- Ketac Silver contains no amalgam

Cavit™ / Cavit™ -W / Cavit™ -G

Temporary Filling Material

Cavit™ is the Evergreen from 3M ESPE.

Indications

- Cavit (high surface hardness):
Temporary filling of occlusion-loaded restorations
- Cavit-W (reduced final hardness, increased adhesion):
Temporary filling after endodontic treatments
- Cavit-G (removable completely without burs):
Inlay-preparation

Product Benefits

- Proven filling material for temporary fillings
- Simple to apply with filling instrument
- Quick and void-free curing in a moist environment

Sealants		●		

* Desiccation not recommended with any 3M ESPE adhesive product. All 3M ESPE adhesives are designed to tolerate a wide range of surface moisture conditions.

- ① Activation Control: Visible control indicates whether or not the L-Pop™ system has been adequately activated.
- ② When used in combination with 3M™ ESPE™ RelyX™ ARC Adhesive Resin Cement.
- ③ For these indications, the additional components of the Adper™ Scotchbond™ Multi-Purpose Plus Adhesive System (bottle activator/bottle catalyst) are required.

Adper™ Easy Bond

Self-Etch Adhesive

Adper™ Easy Bond Self-Etch Adhesive is a simple one component, one coat, self-etch adhesive solution.

Indications

- All classes of fillings with light-curing composite or compomer
- Core build-ups made of light-curing composite
- Repair of composite or compomer fillings
- Root surface desensitization
- Intraoral repair of existing composite, porcelain fused to metal, and all ceramic restorations
- Cementation of indirect restorations (composite or compomer, ceramic and metal, after light-curing and when combined with 3M™ ESPE™ RelyX™ ARC Adhesive Resin Cement

Product Benefits

In addition to being fast and moisture tolerant, it offers:

- Strong and consistent bond performance
- Virtually no post-operative sensitivity
- Self-etch with selective enamel etch option

Introductory Pack Unit Dose Adper™ Easy Bond

Item No.	Product Information
41245	Introductory Kit 1 Bottle Adhesive Vial 5 ml, 50 Disposable Mixing wells, 50 Disposable Microbrushes
41246	Refill 1 Bottle Adhesive Vial 5 ml
41248	Introductory Pack Unit Dose 40 Unit Dose
41249	Giant Pack Unit Dose 100 Unit Dose
41252	Bulk Pack Unit Dose 200 Unit Dose

Adper™ Scotchbond™ 1 XT

Total-Etch Adhesive

Adper™ Scotchbond™ 1 XT Adhesive offers greater confidence.

Indications

- Direct, light-cured composite and compomer restorations
- Bonding of ceramic veneers in combination with 3M™ ESPE™ RelyX™ Veneer Cement
- Indirect restorations made of metal, ceramic or composite in combination with 3M™ ESPE™ RelyX™ ARC Adhesive Resin Cement
- Desensitisation of sensitive cervical areas
- Corrections and repairs to ceramics, PFM and composite restorations

Product Benefits

- Superior bond strength provides exceptional bonding performance
- Nanofiller is stable and will not settle – no shaking required
- Compatible with all light-cured composite restoratives available today

Normal Pack Unit Dose Adper™ Scotchbond™ 1 XT

Item No.	Product Information
4241	Introductory Kit 1 Bottle Adhesive 6 ml, 2 Syringes Scotchbond Etchant, 3 ml each (Phosphoric Acid), 25 Application Tips for Scotchbond Etchant, 48 Single-Use Mixing Wells, 60 Single-Use Brush Tips, 1 Brush Handle

Not all products of this catalogue are available in all countries.

Adper™ Prompt™ L-Pop

Self-Etch Adhesive

Adper™ Prompt™ L-Pop is an all-in-one adhesive in the innovative L-Pop for direct restorations.

Indications

- Adhesive for conventional light-cured composite and compomer restoratives
- Adhesive for pit and fissure sealants
- Desensitization of exposed root surfaces

Product Benefits

- Bonds to dentin, cut enamel and uncut enamel without separate etch step
- Clinically proven – over 100 million applications
- Reduces the risk of post-operative sensitivity, desensitizes hypersensitive root surface
- Yellow colour of the mixture for excellent visual control

Giant Pack Adper™ Prompt™ L-Pop™

Item No.	Product Information
41925	Normal Pack 40 Adper Prompt L-Pop (4.8 ml) with Standard/Red Single-Use Applicators M
41926	Giant Pack 100 Adper Prompt L-Pop (12.0 ml) with Standard/Red Single-Use Applicators M
41928	Economy Pack 500 Adper Prompt L-Pop (60 ml) with Standard/Red Single-Use Applicators M
41923	Mini Pack 20 Adper Prompt L-Pop (2.4 ml) with Fine/Yellow Single-Use Applicators XS

Adper™ Scotchbond™

Multi-Purpose Adhesive

Adper™ Scotchbond™ Multi-Purpose Adhesive has a proven, long-term clinical history of strength and reliability.

Indications

- Direct, light-cured composite and compomer restorations
- Bonding of ceramic veneers in combination with 3M™ ESPE™ RelyX™ Veneer Cement
- Corrections and repairs to ceramics, PFM and composite restorations

Product Benefits

- Complete dental bonding system with dual-cure capabilities
- Allows confident use for any application
- Creates strong and reliable bonds both to wet and dry surfaces

Introductory Kit Adper™ Scotchbond™ MP

Item No.	Product Information
7540S	Introductory Kit 1 Bottle Primer 8 ml, 1 Bottle Adhesive 8 ml, 2 Syringes Scotchbond Etchant, 3 ml each (Phosphoric Acid), 25 Application Tips for Scotchbond Etchant, 60 Single-Use Brushes, 3 Applicator Handles, 1 Mixing Well

2721	1 RelyX Ceramic Primer, 5 ml

Adper™ Scotchbond™

Multi-Purpose Plus

Adper™ Scotchbond™ Multi-Purpose Plus offers additional indications with components of the Adper™ Scotchbond™ Multi-Purpose Adhesive system.

Indications

- Luting of indirect restorations including Maryland bridges and posts with 3M™ ESPE™ RelyX™ ARC Resin Cement
- Bonding of orthodontic brackets

Product Benefits

- Dual-curing
- One system for all indications
- Bonds extremely well to enamel and dentin

Scotchbond™ Etchant

Phosphoric Acid for Enamel and Dentin Etching

Product Benefits

- Contains 35% phosphoric acid
- The syringe version is coloured blue, which makes precise application easier
- The flexible tip can be individually adjusted before application
- The bottle version has a new low-viscosity gel-like consistency
- Does not dry out and retains its consistency
- Etching liquid is a thin fluid and contains 37% phosphoric acid

Universal Restoratives from 3M ESPE

A trusted leader in composite filling materials, 3M ESPE provides you with a range of dental restoratives that stand for reliable clinical performance. Through the incorporation of nano technology in some universal as well as flowable composites, 3M ESPE has been first to combine lasting polish, easy handling, high strength and wear resistance into one single product, a nanocomposite. An additional achievement was the invention of a new matrix technology for a posterior composite with minimized polymerization shrinkage. Take a look at the diverse products in different price categories to learn more about their benefits.

① small ② repair of resin and acrylic temporary materials (e.g. Protemp™ 4)

Filtek™ Supreme XTE is a high-performance, versatile nanocomposite: Lifelike aesthetics and exceptional strength for long-lasting anterior and posterior restorations.

Indications

- Direct anterior and posterior restorations (Classes I, II, III, IV and V)
- Minimally Invasive Dentistry (MID)
- Sandwich technique with glass ionomer resin material
- Cusp buildup
- Core buildup
- Splinting
- Indirect anterior and posterior restorations including inlays, onlays and veneers

Product Benefits

Lifelike aesthetics:

- Excellent polish and polish retention
- Wide range of shades and opacities
- Improved fluorescence

Simple to Use:

- Exceptional handling
- More body shades for single-shade restorations
- Capsules and syringes are color-coded by opacity
- Bold, easy-to-read labels

Unique nanofiller technology:

- Better polish retention than a microfill
- Wears better than leading competitors
- Outstanding strength for anterior and posterior use

Filtek™ Supreme XTE Flowable

New!

Flowable Restorative

Filtek™ Supreme XTE Flowable Restorative offers flow-on-demand handling from either capsules or syringes.

Indications

- Base/liner under direct restorations
- Undercut blockout
- Class III and V restorations
- Restoration of minimally invasive cavity preparations (including small, nonstress-bearing occlusal restorations)
- Repair of small defects in aesthetic indirect restorations
- Pit and fissure sealant
- Repair of resin and acrylic temporary materials

Product Benefits

- Excellent aesthetics
- Unsurpassed polish retention*
- Low wear

*Versus competitive materials tested

Low Shrink Posterior Restorative

Filtek™ Silorane is together with Silorane System Adhesive Self-Etch Primer and Bond a system for direct, posterior restorative fillings, based on 3M ESPE's breakthrough innovation in silorane chemistry.

Indications

- Class I
- Class II

Filtek™ Silorane Restorative and Silorane system adhesive may be used together with glass ionomer cements or resin-modified glass ionomer cements, as cavity liners or bases.

Product Benefits

This milestone innovation combines lowest volumetric shrinkage and excellent strength with biocompatibility for long-lasting posterior restorations.

- Lowest shrinkage to minimise polymerisation stress
- The Filtek™ Silorane Restorative System is a key to excellent margins
- Clinically proven strength and durability – and very low post-operative sensitivities

Introductory Kit Filtek™ Silorane Capsules

Filtek™ P60

Posterior Restorative System

Filtek™ P60 is the packable composite for posterior restorations.

Indications

- Direct posterior restorations class I and II
- Sandwich technique
- Core build-up

Product Benefits

- Superior packability
- Fast curing-time – only 20 sec. to cure an increment of 2.5 mm
- Low polymerisation shrinkage

Introductory Kit Filtek™ P60

Item No.	Product Information
4720	Introductory Kit 3 Syringes, 4 g each in the Shades A3, B2, C2, 1 Bottle Adper Scotchbond 1 XT Adhesive 3 ml, 1 Syringe Scotchbond Etchant 3 ml, Accessories, Shade Guide
Refills	
4720 A3	1 Syringe 4 g, Shade A3
4720 B2	1 Syringe 4 g, Shade B2
4720 C2	1 Syringe 4 g, Shade C2

Sof-Lex™

Finishing and Polishing System

Sof-Lex™ Finishing and Polishing System is a color-coded, sequential system of discs, strips and easy-to-use mandrels and continues to provide unparalleled, efficiently achieved results.

Indications

- Sof-Lex polishing discs and finishing strips for polishing of composite, compomer, metal and ceramic
- Sof-Lex polishing discs for facial and lingual margins of anterior and posterior restorations
- Sof-Lex finishing strips for interproximal area

Product Benefits

Sof-Lex Polishing Discs:

- Flexible polishing discs with aluminium oxide coating
- Four different abrasive grades (coarse to superfine) and two disc thicknesses (normal and extra thin)
- Each abrasive grade is identified by a special colour coding system
- Discs can be easily changed due to the patented Pop-On mandrel system
- Fracture resistant and sterilisable metal mandrel

Sof-Lex Finishing Strips:

- Thin, flexible backing with aluminium oxide coating
- Centre gapped strip with two abrasive grades per strip, which allows interproximal access
- Three different types (fine/superfine, coarse/medium, coarse/medium [narrow])

Introductory Kit Sof-Lex™ Finishing Strips

A close-up photograph of a purple mechanical device, possibly a precision instrument or a specialized tool. The device features a green rectangular display area at the top, which shows a simple line drawing of a zig-zag or stepped profile. Below the display is a circular dial or gauge with a red needle and some faint markings. The overall image has a purple color cast. The text "Precision Impressions" is overlaid in white on a dark purple horizontal band.

Product Benefits

- **Fastest automatic mixer worldwide** – Mixes and dispenses Penta™ materials faster than any other automatic mixing unit
- **Faster work procedure** – Enables quick-setting materials and reduces stress for assistants
- **Smallest automatic mixing unit on the market** – Compact design saves valuable counter/wall space
- **Enhanced handling** – Handles more convenient and ergonomic with one-button operation from both sides of the unit, easier cartridge exchange and easy-to-attach mixing tips
- **Contemporary and robust design**

Technical Data

- Mixer shaft speed 380–760 rpm
- Rate of dispensing 150 ml/min.
- Extrusion force up to 6.500 N – electronically limited to 10.000 N (± 20%)
- Weight 9.8 kg
- Dimensions L 283 mm x W 225 mm x H 280 mm
- Wall mounting available

Lava™ Chairside Oral Scanner C.O.S.

Digital Impression System

The Lava™ Chairside Oral Scanner C.O.S. is a digital impression system that provides a powerful new connection and improved productivity for a doctor and their dental lab. With its Lava™ Chairside Oral Scanner C.O.S., 3M ESPE rounds out its portfolio with a digital impressing solution. Digital imaging replaces physical impressing with trays and impressing material.

Indications

- Single Crowns
- Inlays
- Onlays
- Veneers
- Bridges up to 4 units
- Abutments of seated implants

Product Benefits

With its combination of high-performance hardware and software as well as integrated “3D-in-Motion” technology, the Lava™ Chairside Oral Scanner C.O.S. is the digital solution for one of the most demanding processes in your laboratory.

Productivity

Will replace model making in your lab. Will offer digital process for handling dentist scans – digital bite angle definition, digital dye cutting, digital margin marking. Based on this input high precision plastic model (can be placed in any type of articulators) will be delivered (segmented and solid). Process can be continued either in the traditional way or computer aided design can be used. Digitally designed copings can be milled in Lava or other milling systems. Costs for remakes will drop close to zero.

Flexibility

As design software different systems like Lava Design Software, 3shape and dental wings can be used. Scan data will be delivered in adequate file formats.

Precision

Extremely precise data capture and data input for your laboratory. Will eliminate a very high percentage of remakes and retakes. Will deliver first class fit of restorations and with that very satisfied dentist customers.

Lava™ Chairside Oral Scanner C.O.S.

The Lava Chairside Oral Scanner C.O.S. is now available in selected markets. Please contact your local 3M ESPE organization for more information.

Polyether Impression Materials from 3M ESPE

Improve your daily work with high precision on the first take

Ever since the introduction of its first polyether impression material more than 40 years ago, 3M ESPE has focused on an optimization and expansion of the successful product line. Since then, several soft and fast setting variants, all of which exhibit excellent flow properties, an initial hydrophilicity and a snap set behaviour, have complemented the portfolio. As all materials of the Impregum™ Penta™ product family can be mixed automatically in the Pentamix™ unit, homogeneous mixing results supporting precise impressions are obtained.

Permadyne™ Penta™ H

Polyether Impression Material

Polyether precision impression material (heavy body) for the 1-step tray/wash technique automatically mixed with the Pentamix™. To be used in combination with Permadyne Penta L / Permadyne Garant 2:1.

Indications

- Crown and bridge impressions
- Inlay and onlay impressions
- Functional impression

Product Benefits

- Automatic mixing and dispensing with the Pentamix™ 3 or Pentamix™ 2 Automatic Mixing Unit
- For impressions of uncompromising precision due to convincing polyether properties:
 - Initial hydrophilicity – hydrophilic when it really matters
 - Thixotropy and excellent flow properties – throughout the entire working time
 - “Snap-set” behaviour ensures constant flow properties during working period and less distortions

Refill Permadyne™ Penta™ H

Permadyne™ Penta™ L / Permadyne™ Garant™ 2:1

Polyether Impression Material

Polyether precision impression materials (light body) for the 1-step tray/wash technique. To be used in combination with Permadyne Penta H or Permadyne handmix tray material.

Indications

- Crown and bridge impressions
- Inlay and onlay impressions
- Functional impressions

Product Benefits

- Automatic mixing and dispensing with the Pentamix™ 3 or Pentamix™ 2 Automatic Mixing Unit
- Permadyne Garant 2:1 for mixing and direct application with the Garant™ Dispenser
- For impressions of uncompromising precision due to convincing polyether properties:
 - Initial hydrophilicity – hydrophilic when it counts
 - Thixotropy and excellent flow properties – throughout the entire working time
 - “Snap-set” behaviour ensures constant flow properties during working period and less distortions

Preliminary Impression and Bite Registration Materials from 3M ESPE

In addition to the precision impression solutions 3M ESPE offers also a portfolio of materials for alginate indications and bite registration. With Position™ Penta™ 3M ESPE offers a VPS Alginate Replacement material indicated for the typical alginate indication without the typical alginate stress factors, due to its unique material characteristics but also because it is mixed in the Pentamix™. Ramitec™ Penta™ Polyether Bite Registration Material also has the advantage of simple handling being mixed in the Pentamix™ as well. Benefit also in the field of preliminary impressions and bite registrations from the expertise of the market leader in impression materials, 3M ESPE.

Position™ Penta™ / Position™ Penta™ Quick

VPS Alginate Replacement

Position™ Penta is an innovative VPS alginate replacement material (regular-setting and fast-setting) for all typical alginate indications for automatic mixing and dispensing in the Pentamix™ System from 3M ESPE.

Indications

- Preliminary impressions
- Provisional crown and bridge impressions
- Opposing dentition impressions
- Study model impressions
- Impressions for orthodontic models
- Impressions for bleaching trays and mouthguards

Product Benefits

- Impressive dimensional stability during storage permits pouring models at a later point
- Multiple pour capability without losing accuracy
- Excellent hygiene: In difference to alginates Position can be completely submersed in disinfectant solutions without damage

Position™ Tray

Single-Use Tray for Position™ Penta™/Quick

Single-use tray, completes the VPS impression material Position™ Penta™/Quick to make a complete preliminary impressioning system. Position™ Tray is ideal for all alginate indications and is available in three sizes for both upper and lower jaw.

Indications

- Preliminary impressions
- Provisional crown and bridge impressions
- Opposing dentition impressions
- Study model impressions
- Impressions for orthodontic models
- Impressions for bleaching trays and mouthguards

Product Benefits

- Save time: No tray adhesive needed – these trays have a high auto-retention due to integrated retention fabric
- Easy: The proven design ensures an optimal fit and with only three sizes per jaw also simplifies inventory
- Perfect hygiene: With a single-use tray, there is no need to disinfect and clean as with metal trays

Accessories see page 59

Palgat™ Plus / Palgat™ Plus Quick

Alginate Impression Material

Palgat™ Plus is an alginate with good handling characteristics in practical bags.

Indications

- Temporary restorations
- Study models
- Opposing dentitions

Product Benefits

- Highly elastic and therefore has an excellent elastic memory
- Can be poured without pre-treatment with all standard plasters.
- Tear-resistant and easy to remove from the mouth, even within undercut areas
- Palgat Plus: High-viscosity formulation for shortened setting time

Ramitec™ Penta™ / Ramitec™

Polyether Bite Registration Material

Polyether impression material for bite registration. Available as handmix version or for automatic mixing and dispensing in the Pentamix™ System from 3M ESPE.

Indications

- Bite registration

Product Benefits

- Initial hydrophilicity ensures excellent flow properties even in moist environment
- Thixotropic, i.e. stable at the teeth, yet does not offer resistance when jaws are closed
- Easily carved due to high end hardness

Refill Pack Ramitec™ Penta™

Item No.	Product Information
	Refills

Protemp™ 4

Temporisation Material

Protemp™ 4 temporisation material is a bis-acrylic composite for the fabrication of reliably strong temporaries with splendid aesthetics.

Indications

Fabrication of temporary

- Crowns and bridges
- Inlays and onlays
- Veneers
- Long-term temporary restoration
- Implant temporisation

Lining material for prefabricated temporary crowns made of composite (e.g. Protemp™ Crown) and metal (e.g. Iso-Form™ Crowns)

Product Benefits

With a string of unparalleled features, Protemp 4 temporization material is unique to the market and was developed to satisfy even the most demanding temporization disciplines:

- Record breaking fracture resistance through sophisticated nano filler technology
- Patient-pleasing aesthetics: Better color stability – even over the long term
- Tangibly less inhibition layer for easy handling

Protemp™ II

Composite for Temporary Crowns and Bridges

Protemp™ II is a composite material for temporary restorations in the handmix version.

Indications

- Crowns and bridges
- Partial crowns
- Inlays
- Onlays

Product Benefits

- High precision fit of the temporary restoration with exact marginal seal
- High dimensional stability
- High biocompatibility
- Handmix system with acoustic pre-dosage (Protemp II click sound)

Protemp™ Crown

Temporisation Material

Protemp™ Crown is the world's first single-unit, self-supporting, malleable and light curable composite crown.

Indications

- Single-unit posterior temporisation
- Long-term temporisation
- Implant temporisation
- Digital impression-taking

Product Benefits

With its preformed anatomy, precision fit and excellent strength, Protemp Crown material is a unique temporisation solution for single posterior units and ideal in situations where fabricating a matrix is not possible.

- Excellent strength – also for long-term temporisation
- Unique solution – also for implant and digital procedures
- Simple – no matrix needed

Stainless Steel Crowns

Stainless Steel Crowns for Permanent and Primary Molars

3M ESPE's Stainless Steel Crowns are made out of high quality stainless steel using a proprietary process that results in outstanding physical properties.

Indications

- Long-term restoration of primary molars
- Temporary and interim restorations of permanent molars – can also be used for long-term case with economic considerations

Introductory Kit Stainless Steel Crowns

Product Benefits

- Convenient: pre-trimmed, belled and crimped for fast and easy placement
- Comfortable fit: accurately duplicates anatomy for better fit and performance
- Superior longevity compared to multi-service amalgam fillings

Cements from 3M ESPE

With the RelyX™ Cement family 3M ESPE offers one of the most comprehensive product lines of easy-handling, high quality products on the cement market.

The RelyX family embraces the complete range of luting cements: RelyX™ Unicem Family, RelyX™ ARC, RelyX™ Luting, RelyX™ Veneer for permanent cementation, up to RelyX™ Temp E and NE for temporary cementation. The newest member of this is the self-adhesive resin cement RelyX™ Unicem 2 Automix. The automix syringe is on the rise of being the preferred delivery and sets a new standard in ease-of-use and reliability.

The RelyX cements are characterized by an outstanding high quality. It is easy to find the suitable luting cement for each case of treatment. The cements are distinguished by

- Precise and accurate dosage systems
- Constant working and setting times
- Easy excess removal

RelyX™ Unicem 2 Automix RelyX™ Unicem 2 Clicker™

Self-Adhesive Resin Cement

RelyX™ Unicem 2 is a self-adhesive resin cement, which now is available in an easy-to-use automix syringe and in the Clicker™ Dispenser.

Indications

RelyX™ Unicem 2 Cement is indicated for the permanent cementation of:

- All-ceramic, composite, or metal inlays, onlays, crowns and bridges
- Posts and screws
- 2- or 3-unit Maryland bridges
- 3-unit inlay/onlay bridges
- All-ceramic, composite, or metal restorations to implant abutments

Product Benefits

With RelyX™ Unicem 2, the outstanding product performance and quality of renowned RelyX™ Unicem is also available in an easy-to-use automix syringe and Clicker™ Dispenser.

- Comfortable and easy delivery
- Simple and time-saving one-step solution
- Excellent bond strength on various materials

• Working time (including mixing):

RelyX Unicem 2 Automix	2:00 min.
RelyX Unicem 2 Clicker	2:00 min.

• Light curing:

RelyX™ Fiber Post

Glass Fiber Post

RelyX™ Fiber Posts are made out of glass fibers to ensure an elasticity that is very similar to human dentin resulting in much lower risk of root fracture.

Indications

- In case of insufficient residual tooth structure (< 4 mm)
- A post is needed to support and secure the coronal restoration

Product Benefits

- Greater fatigue resistance than many other leading fiber posts
- Aesthetic due to excellent high translucency and no risk of corrosion that can occur with metal posts
- The RelyX™ Unicem system makes cementing a post faster, easier and more reliable – designed fo achieve excellent clinical results

Starter Kit RelyX™ Fiber Post

RelyX™ Veneer

Veneer Cement

RelyX™ Veneer Cement is a light-cure only resin cement. This veneer cement system comes in the syringe, the customer-preferred delivery and a colour match system that's easy to use and easy to clean up.

Indications

Permanent cementation of

- Porcelain veneers
- Ceramic veneers
- Composite veneers

Product Benefits

- Ensuring top aesthetics because of excellent colour stability
- Try-In pastes are water soluble and residue-free and offer excellent colour match to the final cured cement for better patient satisfaction
- Excellent adhesion to dentin and enamel reduces the potential for microleakage and marginal staining
- Ideal, on-slump cement viscosity prevents veneer drift and easy definite positioning of the veneer

Introductory Kit RelyX™ Veneer

Item No.	Product Information
8713	Introductory Kit 5 Try-In Paste (Translucent, White-Opaque, A1/Light Yellow, A3 Opaque/Yellow Opaque, A5/Dark, B0.5/White), 2 g each, 5 Cement Syringes (Translucent, White-Opaque, A1/Light Yellow, A3 Opaque/Yellow Opaque, B0.5/White), 3 g each, 1 Syringe Scotchbond Etchant, 3 ml, 1 Bottle RelyX Ceramic Primer, 5 ml, 1 Adper Scotchbond 1 XT Adhesive, 6 ml
Refills	
8714TR	1 Cement Syringe 3 g, Shade Translucent
8714WO	1 Cement Syringe 3 g, Shade White Opaque
8714A1	1 Cement Syringe 3 g, Shade A1/Light Yellow

RelyX™ ARC

Adhesive Resin Cement

RelyX™ ARC for all cementations where enhanced bonding and/or aesthetics are required.

Indications

RelyX™ ARC cement is indicated for luting the following types of restorations:

- Porcelain-fused-to-metal (PFM) crowns and bridges
- Metal crowns, inlays and onlays
- Prefabricated metal provisional crowns
- Strengthened core all-zirconia or all-alumina ceramic crowns and bridges (i.e. Lava™ Zirconia from 3M™ ESPE™ or Procera® AllCeram)
- Prefabricated or cast posts
- Orthodontic bands and appliances

Product Benefits

- High bond strength
- Easy excess removal
- Dual-curing

- **Mixing time:** 0:10 min.
- **Light curing time:** 0:40 min.

Introductory Kit RelyX™ ARC

Item No.	Product Information
3415	Introductory Kit 1 Clicker 4.5 g, Shade A1, 1 Clicker 4.5 g, Shade A3, 1 Adper Scotchbond 1 XT Adhesive, 6 ml, 2 Scotchbond Etching Gel in Syringe, 3 ml each, 1 Ceramic Primer, 5 ml, Accessories
Refills	
3415 A1	1 Clicker 4.5 g, Shade A1
3415 A3	1 Clicker 4.5 g, Shade A3

RelyX™ Luting

Luting Cement

RelyX™ Luting cement is a resin-modified glass ionomer cement used for routine cementation of PFM and metal crowns, bridges, inlays/onlays, crowns made with all-alumina or all-zirconia cores such as Lava™.

Indications

RelyX™ Luting cement is indicated for luting the following types of restorations:

- Porcelain-fused-to-metal (PFM) crowns and bridges
- Metal crowns, inlays and onlays
- Prefabricated metal provisional crowns
- Strengthened core all-zirconia or all-alumina ceramic crowns and bridges (i.e. Lava™ Zirconia from 3M™ ESPE™ or Procera® AllCeram)
- Prefabricated or cast posts
- Orthodontic bands and appliances

Product Benefits

- Radiopaque
- Sustained fluoride release
- Virtually no postoperative sensitivity

- **Working time (incl. mixing):** 2:30 min.

Introductory Kit RelyX™ Luting

Item No.	Product Information
3505	Introductory Kit 1 Powder 16 g, 1 Liquid 9 ml, 1 Measuring Spoon, 2 Mixing Pads
Refills	
3505 P	1 Powder 16 g
3505 L	1 Liquid 9 ml

Not all products of this catalogue are available in all countries.

Ketac™ Cem Plus

Luting Cement

Ketac™ Cem Plus Luting Cement is an advanced paste-paste, resin-modified glass ionomer formula. It comes in the convenient Clicker™ dispenser.

Indications

Cementation of

- Crowns
- Bridges
- Inlays
- Onlays made of metal or porcelain-fused to metal as well as all-alumina or all-zirconia strengthened core ceramic systems
- Cementation of endodontic posts and orthodontic appliances made of metal

Product Benefits

- Easy and hygienic handling with the award-winning Clicker™ Dispenser, ensuring a consistent mix ratio
- Paste-paste formulation for easy mixing
- Enhanced marginal integrity with low solubility
- Sustained fluoride release
- **Working time (incl. mixing):** 2:50 min.
- **Setting time (from begin of mix):** 5:00 min.

Trial Kit Ketac™ Cem Plus

Item No.	Product Information
56931	Trial Kit 1 Clicker Dispenser 11 g, 1 Mixing Pad
56930	Refill 2 Clicker Dispenser 11 g each, 1 Mixing Pad

Ketac™ Cem Aplicap™ / Maxicap™

Glass Ionomer Luting Cement

Ketac™ Cem is the glass ionomer luting cement from 3M ESPE. It has been subject of extensive scientific studies and has often been described as the “Gold Standard” for conventional cementation. It's available in the convenient Aplicap™/Maxicap™ System from 3M ESPE and all handmix versions.

Indications

- Permanent cementation of inlays, onlays, crown, and bridges made of metal or porcelain fused to metal
- Permanent cementation of inlays, onlays, crown, and bridges made all-alumina or all-zirconia strengthened core ceramic systems (e.g. Lava™ Crowns & Bridges)
- Permanent cementation of endodontic posts and orthodontic appliances made of metal
- Cavity lining

Product Benefits

- Confidence due to its proven long-term clinical success
- High level of biocompatibility
- Simple and user-friendly cementation material
- **Working time (including mixing):**
Ketac Cem Aplicap / Maxicap 3:00 min.
- **Setting time (from begin of mix):**
Ketac Cem Aplicap / Maxicap 7:00 min.

Ketac™ Cem Easymix

Glass Ionomer Luting Cement

Indications

- Permanent cementation of inlays, onlays, crowns and bridges made of
 - Metal or porcelain-fused to metal
 - All-alumina or all-zirconia strengthened core ceramic systems (e.g. Lava™ Crowns & Bridges)
- Permanent cementation of endodontic posts and orthodontic appliances made of metal
- Cavity lining

Product Benefits

- Granula formulation for easy hand mixing
- Exact dosage without residual dust
- Low film thickness
- Radiopaque
- Fluoride release

- **Working time (incl. mixing):** 3:10 min.
- **Setting time (from begin of mix):** 7:00 min.

Durelon™ / Durelon™ Maxicap

Carboxylate Luting Cement

Durelon™ is a carboxylate luting cement which comes in a handmix version or in the convenient Maxicap System from 3M ESPE. It is available as normal setting and fast setting versions.

Indications

- Permanent cementation of inlays, onlays, crowns and bridges made of
 - Metal except titanium frameworks
 - Porcelain-fused to metal
- Cavity lining

Product Benefits

- Simple technique requires non conditioning and no bonding agents for reduced chair time
- Thin film thickness
- Fluoride release

Handmix version – cementation (1:2):

- Powder normal setting, universal liquid: 2:30*/10:00** min.
- Powder normal setting, thin-flowing liquid: 2:00*/7:00** min.
- Powder fast setting, universal liquid: 1:00*/5:00** min.
- Powder fast setting, thin-flowing liquid: 1:00*/3:30** min.

Handmix version – linings (1:1):

- Powder normal setting, universal liquid: 1:30*/6:00** min.
- Powder fast setting, universal liquid: 0:45*/3:30** min.

Maxicap version:

- **Working time (including mixing):**
Durelon Maxicap 2:30 min.
- **Setting time (from begin of mix):**
Durelon Maxicap 5:30 min.

*) Working time (from begin of mix)

**) Setting time (from begin of mix)

RelyX™ Temp NE

Temporary Cement Zinc Oxide Non-Eugenol

RelyX™ Temp NE is an ideal partner for use with precision-fitting restorations made from temporization materials such as Protemp™ 4.

Indications

- Temporary cementation of temporary and permanent crowns and bridges

Product Benefits

- Eugenol-free for universal applications because it will not inhibit the polymerization of composite remains on the temporary resin cements
- Very low film thickness helps ensure an optimal fit
- High adhesion offers high retention to the tooth, yet it is removed easily for final cementation
- Saves time because the majority of the cements remains on the temporary not on the tooth

Refill RelyX™ Temp NE

Item No.	Product Information
56660	Refill 1 Base Paste 30 g, 1 Catalyst 13 g, 1 Mixing Pad

RelyX™ Temp E

Temporary Cement Zinc Oxide Eugenol

Indications

- Temporary cementation of temporary and permanent crowns and bridges

Product Benefits

- Easy removal of the excess cement from the tooth and the restoration
- Reduction of end hardness possible by adding vaseline
- Very low film thickness helps ensure an optimal fit
- High adhesion offers high retention to the tooth, yet it is removed easily for final cementation
- Saves time because the majority of the cements remains on the temporary not on the tooth

Refill RelyX™ Temp E

Item No.	Product Information
35014	Refill 1 Base Paste 25 g, 1 Activator 18 g, 1 Mixing Pad

Implants

Implants

3M ESPE Mini Dental Implants

Page 88–89

3M™ ESPE™ MDI™

Mini Dental Implants

A leading minimally invasive implant system to stabilize full dentures and more.

Indications

For all MDI implants:

- Long-Term Full Denture Stabilization
- Long-Term Partial Denture Stabilization
- Long-Term Splinted Fixation of Bridges

In addition for MDI 2.9 mm implant:

- Long-Term Fixation of Single Crowns

Product Benefits

- Minimally invasive procedure
- Often no grafting necessary
- Immediate load in most cases
- Very cost effective for the dental practice
- Very affordable for denture patients

© 3M™ ESPE™ MDI Mini Dental Implants, 2015. All Rights Reserved.

© 3M™ ESPE™ MDI Mini Dental Implants, 2015. All Rights Reserved.

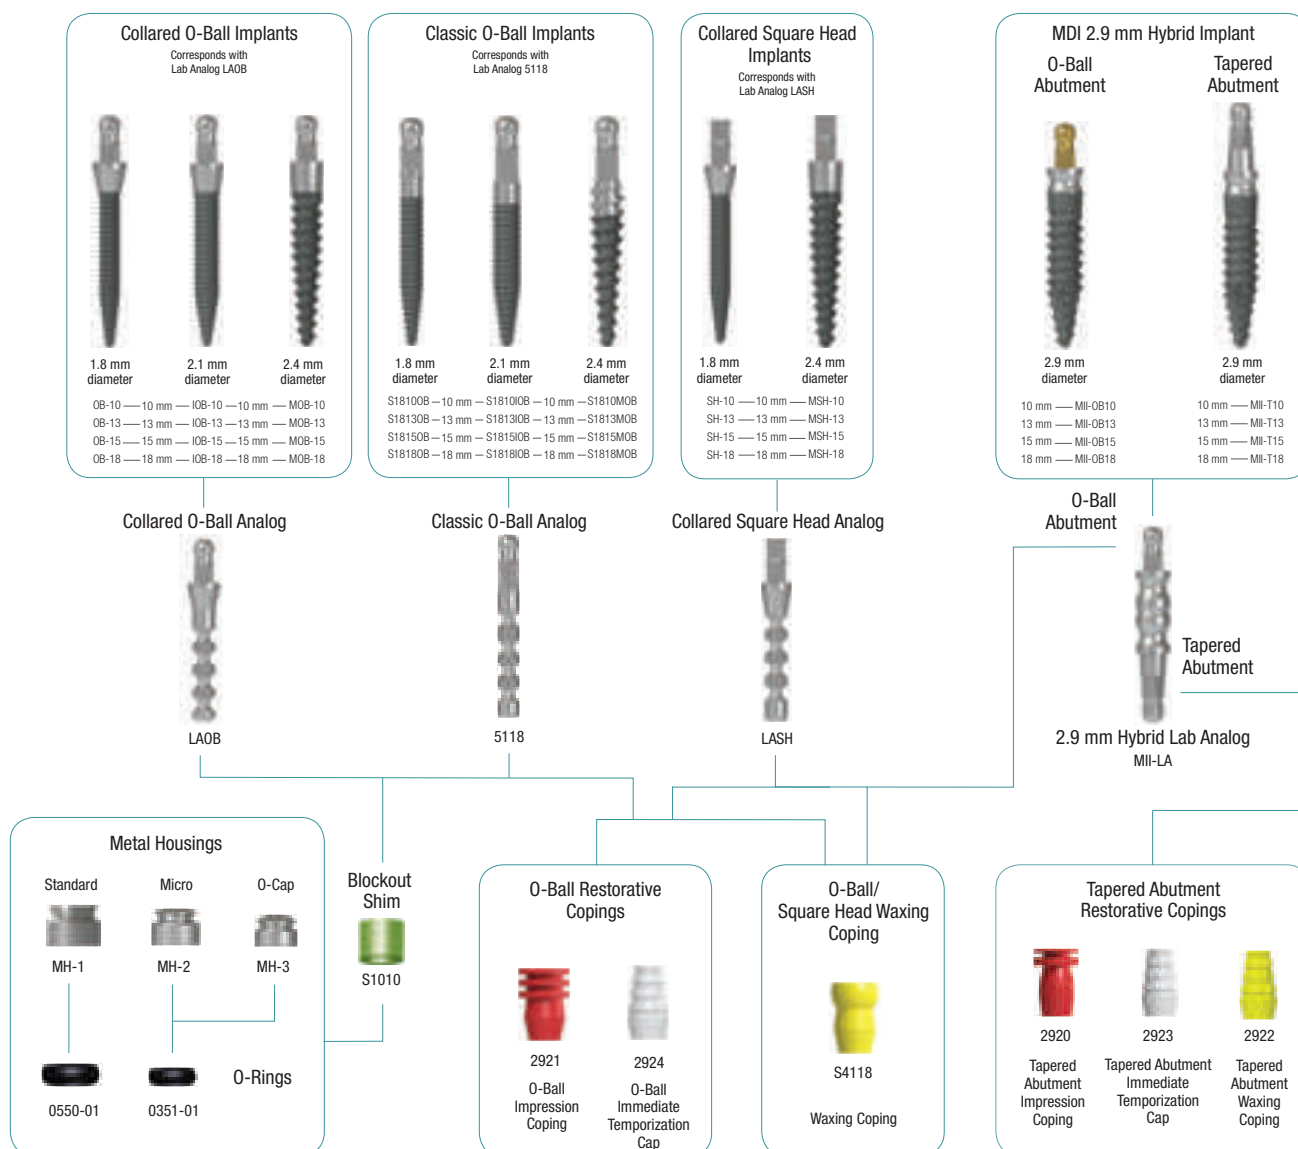

The 3M ESPE MDI Mini Dental Implants were developed to provide greater denture stability for those who

- can't withstand the rigors of conventional implant surgery
- don't have enough bone to allow for full-size implants to be placed, or
- are seeking an option with a lower cost than traditional implant treatment

Features

- Implants are placed through a small pilot hole, not into a full osteotomy
- Implant designs for stability in soft and dense bone (essential for immediate loading)
- Attachment designs for customized retention for each case
- Attachment designs that forgive up to 30° divergence between two implants
- Original retention can be restored by simply changing an O-Ring
- A market leading small diameter implant training program

Mini Dental Implants

For full portfolio, including available kits and additional accessories, see MDI Mini Dental Implants Product Guide.

Lava™ Network

Scanner & Software

Lava™ Scan ST

A Journey that starts with a Precise Scanner

The new Lava™ Scan ST offers benchmark scanning technology and unique properties allowing advanced restoration design. It is your access to the digital world of modern dentistry.

Product Benefits

- Unreached precision
- Fast scanning and convenient workflows
- High reliability and robust design

Technical Informations

- **Scan Volume:** 80 x 100 x 42 mm³
- **Scanner Size:** Width: 545 mm, Height: 800 mm, Depth: 465 mm
- **Weight:** 45 kg
- Scan a single stump in about 10 sec.
- Non-contact, optical scanner with fringe projection triangulation for high accuracy
- Ergonomic scan handling – design and convenient handling with one hand height adjustment
- **Electrical Line Voltage:** 100 – 240 Volts
- **Frequency:** 50 Hz – 60 Hz
- **Power:** 250 Watt

Lava™ Scan ST

For order information, please contact your local 3M ESPE organization for more information.

Sinfony™ Indirect Lab Composite is a microhybrid composite developed for laboratories and designed to build and layer like porcelain.

Indications

Partial or complete veneering of

- Crowns and bridges in repair applications
- Telescope and cone crowns
- Galvanic double crowns
- Attachments
- Implant supra-constructions
- Adhesive bridges
- Glass fiber-reinforced crowns and bridges

Fabrication of non-reinforced

- Facings
- Inlays and onlays
- All-composite single crowns

Customisation of

- Dentures
- Denture teeth
- Protemp™ temporary restorations

Product Benefits

- Excellent aesthetics/translucency
- Superior wear characteristics as well as plaque and stain resistance
- Ease of finishing and polishing

Sinfony™ Magic Intensive Shades

allows the dental technician to imitate cracks and chips in enamel, lime spots, filling imitations, worn surfaces and the widest variety of features in the cervical, fissure or incisal area. The Magic Intensive shades opens up design possibilities such as were previously seen only on porcelain veneers.

Sinfony™ Opaque Dentins

imitates nature through the creation of dark and shadowed zones, by the play of light and shadow. Even in an extremely thin layer, the Opaque Dentins allow the denture to appear plastic and brilliant. The impressive hiding power of Opaque Dentins balances the shades especially in interdental spaces and cervical zones.

Particularly for the double crown technique, in which space restrictions allow only minimal layer thicknesses, the Opaque Dentin-Materials stop the transparency of the Opaquer and the associated change in the shade effect of the work. In spite of the increased opacity, the shades are adjusted in such a way that warm, vital tones of colour result. The colour matching to porcelain veneers and ready-made teeth is excellent.

Sinfony™ Intensive Opaquer

With the 5 Intensive-Opaquers, veneers can be characterised very individually: in all shades and to any required intensity.

Shades: pink, orange, brown, violet-grey, ochre.

Sinfony™ Enamel Effect and Transpa Opal Materials

The ceramist endeavours to create aesthetic restorations which can stand up to nature's light. 3M ESPE research has been successful in accomplishing a decisive step towards integrating the "play of light on teeth" into a composite veneer material by developing the Enamel-Effect-Materials "polar" and "sun", and the 4 Transpa-Opal-Materials neutral, yellow, blue and grey.

Using these materials, the light-optical properties of aesthetic restorations can be matched to the natural original in a fascinating and simple layering technique.

Micro-Abrasion Bonding/Coating for Metal, Ceramic and Plastic Materials

The Rocatec™ Universal Bonding System, from 3M™ ESPE™, provides everything you need to achieve an ideal surface preparation.

Indications

- Crowns anterior
- Crowns posterior
- Bridges anterior
- Bridges posterior

Product Benefits

- Patented formula creates an ideal surface for optimal bonding
- Ideal for ceramics, composites, all porcelain fused-to-metals, alumina and zirconia
- Provides excellent bond strength without marginal gap
- Allows bonding to normally non-retentive surfaces

3M ESPE Sil

ESPE Sil creates a silane layer on the silicate coated surface and produces the chemical bond with Sinfony™ Opaquer and the veneering material Sinfony™ from 3M ESPE.

Reprogum™ F / Reprogum™

Polyether Precision Duplicating Material

Reprogum™ F / Reprogum™ are precision duplicating materials on a polyether base. Individually dispensable.

Indications

- Applicable for the duplication of master models especially for all-ceramic restorations requiring a refractory investment model and when inlays, onlays, cantilevers and other precision attachments are being fabricated

Product Benefits

- Exact reproduction of detail, high tear strength, best consistency of form
- For optimum duplicate plaster, investment material and modelling resin models
- Economical, time-saving and efficient because only the required amount needs to be dispensed
- Reprogum F features multiple casting possibilities and short production time for the duplication

Bottles Reprogum™ F Components I, II, Catalyst

Item No.	Product Information
	Shipping Unit Reprogum F
85370	3 Bottles Component I, 5.500 g each with Instructions on the Container
85380	3 Bottles Component II, 1.500 g each
85390	3 Bottles Catalyst, 205 g each or as single pack in the market
	Standard Packs Reprogum F
85340	1 Dispensing Pump for Component I with Instructions
85350	1 Dispensing Pump for Component II with Instructions
85360	1 Dispensing Pump for Catalyst, assembled

Vestogum™

Gingiva Modelling Material

Indications

- Applicable for combination works, telescopic works, anterior tooth area
- Forming of different tooth lengths
- Color rating of the veneer material
- Controlled modelling

Product Benefits

- Quick and exact reconstruction of the gingiva
- Helps the dental technician, particularly with the production of anterior crowns and bridges
- Makes potential pressure spots and cosmetic defects visible on the model
- Matches the natural colour of the gingiva, and therefore allows reliable shade control of the veneers
- **Setting time (from begin of mix):** 8:00 min.

Standard Pack Vestogum™

Item No.	Product Information
86020	Standard Pack 1 Base Paste 120 g, 1 Catalyst 15 g, 1 Mixing Pad

Visio™ Form

Light-Curing Pattern Resin

Visio™ Form is a light-curing modelling resin for the requirements of modern casting techniques.

Indications

- Applicable for the modelling of conical crowns, telescopic crowns, and their variations
- Inlays and onlays for casting
- Model cast extensions without a duplicate model
- Adhesive bridges and soldering-models for blocking

Product Benefits

- Homogeneous cast objects
- High mechanical strength and low polymerisation shrinkage
- High impression precision
- Easy to lift away from the primary structures due to internal isolation

Standard Pack Visio™ Form

Item No.	Product Information
78420	Standard Pack 2 Dispensers, 4 g each (blue)

Visio™ Bloc

Light-Curing Block-out Resin

Visio™ Bloc is a light-curing block-out resin for precise abutment preparation.

Indications

- Applicable for blocking out undercuts
- Occlusal reconstruction of tooth stumps
- Correction and restoration of models and stumps
- Fixing of clamps in orthodontics

Product Benefits

- The single-component material which can block out defects and undercuts on the model quickly, precisely and securely
- Simple application with no sticking to the instrument
- Secure adhesion to plaster, plastic and epoxy resin models
- Thermostable in immersion and vacuum systems
- Following final polymerisation Visio-Bloc can be trimmed with carbide burs

Giant Pack Visio™ Bloc

Item No.	Product Information
78020	Giant Pack 6 Tubes, 2 g each (blue)

Nimetic™ Cem

Composite Attachment Cement

“Glueing instead of soldering”: Nimetic™ Cem is a composite attachment cement for the modern combination technique.

Indications

- Applicable for the adhering telescope or conical crowns to cast base plates
- Adhering anchors and pre-fabricated attachments to cast base plates

Product Benefits

- Superb adhesion and extreme strength values
- Ideal flow characteristics
- Accurate dispensing with the double cartridge
- Nimetic Cem bonds with the prosthetic plastic

- **Working time (from begin of mix):** 2:30 min.
- **Setting time (from begin of mix):** 4:00 min.

Standard Pack Nimetic™ Cem

Item No.	Product Information
81001	Standard Pack 1 Base Paste 2.5 g, 1 Catalyst 2.5 g in Double Measuring Syringe, 1 Spatula, 1 Mixing Pad, Accessories

Local
Anaesthetics

Local Anaesthetics

Solutions for Injection

Ubistesin™

Ubistesin™ forte

Mepivastesin™

Xylestesin™-A

Aspiration Syringe

Pluraject™ 2

Summary of Product Characteristics

Page 102–105

Ubistesin™ / Ubistesin™ forte

Solution for Injection

Ubistesin 1/200 000 for routine-type interventions and
Ubistesin 1/100 000 for more complex interventions.

Indications

Need-based dosage, unerring placement

• Ubistesin™ 1/100 000

Local anaesthesia (infiltration and nerve-block anaesthesia) in dentistry. Ubistesin™ 1/100 000 is especially indicated for complicated procedures requiring prolonged anaesthesia.

• Ubistesin™ 1/200 000

Local anaesthesia (infiltration and nerve-block anaesthesia) in dentistry during minor procedures.

Product Benefits

- Contains 4% articaine with epinephrine (adrenaline) 1/100 000 and 1/200 000 respectively as a vasoconstrictor
- Contains only sulfite as a stabilizer (max. 0.31 mg)
- Cylindrical glass ampoules with inner coating of silicone for smooth and gentle injection and red (1/200 000) and gold (1/100 000) colour-coded aluminium caps – minimising the risk of confusion. Packaging in a stable metal box with a padded interior

Ubistesin™ 1/200000 – Tin with 50 cartridges

Item No.	Product Information
	Normal Packs
15010	Ubistesin 1/200 000 1 Tin with 50 cartridges (Redcap), 1.7 ml each; Local packaging available
15110	Ubistesin 1/100 000 1 Tin with 50 cartridges (Goldcap), 1.7 ml each; Local packaging available

Mepivastesin™

Solution for Injection

Mepivastesin™ for minor procedures in specific patient groups.

Indications

- For simple extractions as well as cavity and stump preparations
- Especially suitable for patients to whom vasoconstricting additives are contraindicated

Product Benefits

- Contains 3% mepivacaine
- Contains no further additives and no epinephrine
- Cylindrical glass ampoules with inner coating of silicone for smooth and gentle injection and blue colour-coded aluminium caps – minimising the risk of confusion. Packaging in a stable metal box with a padded interior

Mepivastesin™ – Tin with 50 cartridges

Item No.	Product Information
13014	Normal Pack 1 Tin with 50 cartridges (Bluecap), 1.7 ml each; Local packaging available

Summary of Product Characteristics on page 104–105

Xylestesin™ -A

Solution for Injection

Indications

- For routine-type interventions

Product Benefits

- Contains 2% lidocaine with epinephrine (adrenaline) 1:80 000 as a vasoconstrictor
- Contains only sulfite as a stabilizer (max 0.31 mg)
- Cylindrical glass ampoules with inner coating of silicone for smooth and gentle injection and green colour-coded aluminium caps. Packaging in a stable metal box with a padded interior

Xylestesin™-A – Tin with 50 cartridges

Item No.	Product Information
10810	Normal Pack 1 Tin with 50 cartridges (Greencap), 1.7 ml each; Local packaging available

Pluraject™ 2

Aspiration Syringe

Pluraject™ 2 is an aspiration syringe for cylindrical glass ampoules with perforated stoppers.

Indications

- Aspiration Syringe for 1.8 ml cylindrical glass ampoules with perforated stoppers
- For use with dental injection needles with metric and inch thread
- Manual aspiration (active)
- Self-aspiration (passive)

Product Benefits

- Lightweight and compact for better handling
- Easy loading and unloading of ampoules thanks to flip mechanism
- Active and passive aspiration possible

Pluraject™ 2 Syringe

Item No.	Product Information
76011	1 Syringe, complete, metric thread
76012	1 Syringe, complete, inch thread

Summary of Product Characteristics on page 104–105

3M ESPE Local Anaesthetics

Summary of Product Characteristics

Ubistesin 1/100000
40 mg/ml + 10 micrograms/ml
solution for injection

Ubistesin 1/200000
40 mg/ml + 5 micrograms/ml
solution for injection

COMPOSITION

Ubistesin 1/100000

1 ml solution for injection contains:

Active substances:

Articaine hydrochloride	40 mg
Epinephrine (Adrenaline) (as hydrochloride)	10 micrograms

Ubistesin 1/200000

1 ml solution for injection contains:

Active substances:

Articaine hydrochloride	40 mg
Epinephrine (Adrenaline) (as hydrochloride)	5 micrograms

Excipients:

Sodium sulphite (E 221)	0.6 mg
Sodium chloride, Water for injections, Hydrochloric acid 14% and Sodium hydroxide solution 9% for adjusting the pH-value	

CLINICAL PARTICULARS

Therapeutic indications

Ubistesin 1/100000

Local anaesthesia (infiltration and nerve-block anaesthesia) in dentistry.

Ubistesin 1/100000 is especially indicated for complicated procedures requiring prolonged anaesthesia.

Ubistesin 1/200000

Local anaesthesia (infiltration and nerve-block anaesthesia) in dentistry during minor procedures.

Contraindications

Ubistesin is not allowed to be used in the event of

- children under 4 years of age (< 20 kg)
- hypersensitivity to the active substances, sodium sulphite (E221) or to any of the other excipients

Due to the local anaesthetic ingredient articaine, Ubistesin is not allowed to be used in the event of

- known allergy or hypersensitivity to local anaesthetics of the amide type
- severe impairment of the impulse initiation and conduction system of the heart (e.g. grade II and III AV block, pronounced bradycardia)
- acutely decompensated cardiac insufficiency
- severe hypotension
- patients who are known to have a deficiency in plasma cholinesterase activity
- haemorrhagic diatheses – particularly with nerve-block anaesthesia
- injection into an inflamed area

Due to the content of epinephrine as a vasoconstrictor admixture, Ubistesin is not allowed to be used in the event of

- Heart diseases such as:
 - unstable angina pectoris
 - recent myocardial infarction
 - recent coronary artery bypass surgery
 - refractory arrhythmias and paroxysmal tachycardia or high-frequency, continuous arrhythmia
 - untreated or uncontrolled severe hypertension
 - untreated or uncontrolled congestive heart failure
 - concomitant treatment with monoamine oxidase (MAO) inhibitors or tricyclic antidepressants

Due to the content of sulphite as excipient, Ubistesin,

is not allowed to be used in the event of

- allergy or hypersensitivity to sulphite
- severe bronchial asthma

Ubistesin can provoke acute allergic reactions with anaphylactic symptoms (e.g. bronchospasm).

Special warnings and precautions for use

Ubistesin must be used with particular caution in the event of

- severe impairment to the renal function
- angina pectoris
- arteriosclerosis
- considerably impaired blood coagulation
- thyrotoxicosis
- narrow-angle glaucoma
- diabetes mellitus
- lung diseases – particularly allergic asthma
- pheochromocytoma

Accidental injection may be associated with convulsions, followed by central nervous system or cardiorespiratory arrest. Resuscitative equipment, oxygen, and other resuscitative drugs should be available for immediate use.

Since amide-type local anaesthetics are also metabolised by the liver, Ubistesin should be used with caution in patients with hepatic diseases. Patients with severe hepatic diseases are at greater risk of developing toxic plasma concentration.

The product should be administered with caution in patients with impaired cardiovascular function since they may be less able to compensate for functional changes associated with the prolongation of A-V conduction produced by these drugs.

The product should be administered with caution to patients with history of epilepsy.

There is a possibility of positive results on doping tests performed on sportsmen.

It should be taken into consideration that during treatment with blood coagulation inhibitors (e.g. heparin or acetylsalicylic acid), an inadvertent vasopuncture when administering the local anaesthetic can lead to serious bleeding, and that in general the hemorrhagic tendency is increased.

Inadvertant intravascular application must be avoided.

The lower blood flow in the pulp tissue due to the content of epinephrine and thus the risk to overlook an opened pulp has to be taken into account regarding cavity or crown preparations.

This medicinal product contains less than 1 mmol sodium (23 mg) per 1 ml, i.e. essentially "sodium-free".

The product must be used with particular caution in patients taking phenothiazines or non-selective beta-blockers.

Precautions for use:

Each time a local anaesthetic is used the following medicinal products/therapy as well as an indwelling i.v. catheter set should be available:

- Anti-convulsant medicines (benzodiazepines or barbiturates), myorelaxants, atropine and vasopressors or adrenaline as well as an electrolyte solution for a severe allergic or anaphylactic reaction.
- Resuscitating equipment (in particular a source of oxygen) enabling artificial ventilation if necessary.
- Careful and constant monitoring of cardiovascular and respiratory (adequacy of ventilation) vital signs and the patient's state of consciousness should be monitored after each local anaesthetic injection. Restlessness, anxiety, tinnitus, dizziness, blurred vision, tremors, depression, or drowsiness may be early warning signs of central nervous system toxicity.

Pregnancy and lactation

For Ubistesin no clinical data on exposed pregnancies are available. In regard of articaine animal studies do not indicate direct or indirect harmful effects with respect to pregnancy, embryonal/foetal development, parturition or postnatal development. Animal studies carried out with epinephrine have shown reproductive toxicity. The potential risk for humans is unknown. Caution should be exercised when prescribing to pregnant women.

It is unknown whether articaine and epinephrine is excreted in human breast milk. The excretion of articaine and epinephrine in milk has not been studied in animals. A decision on whether to continue/discontinue breast-feeding or to continue/discontinue therapy with Ubistesin should be made taking in to account the benefit of breast-feeding to the child and the benefit of Ubistesin therapy to the women. Therefore, nursing mothers should milk and discard the first mother's milk following anaesthesia with articaine.

Effects on the ability to drive and use machines

Although test patients have shown no impairment of their normal reactions when driving a vehicle, the dentist has to assess in each case the possible impairment of safety when operating a motor vehicle or machinery. The patient should not leave the dental office earlier than at least 30 minutes after the injection.

Undesirable effects

Due to the local anaesthetic ingredient articaine, the following adverse effects can occur

Cardiovascular disorders

Rare ($\geq 1/10,000$ to $< 1/1,000$)

Decrease in heart rate, hypotension. Drop in blood pressure, cardiac impulse conduction disorders, bradycardia, asystolia, cardiovascular arrest.

Nervous system disorders

Rare ($\geq 1/10,000$ to $< 1/1,000$)

Metallic taste, tinnitus, dizziness, nausea, vomiting, restlessness, anxiety, yawning, shaking, nervousness, nystagmus, logorrhoea, headache, increase in respiratory rate. Paresthesias (loss of sensation, burning, tingling) of the lip, tongue, or both. These signs when they appeared required rapid corrective measures to prevent possible worsening. Drowsiness, confusion, tremor, muscle twitching, tonic-clonic seizures, coma and respiratory paralysis.

Respiratory disorders

Rare ($\geq 1/10,000$ to $< 1/1,000$)

Tachypnea, then bradypnea, which could lead to apnoea.

Allergic reactions

Very rare ($< 1/10,000$)

One may observe manifestation of hypersensitivity to articaine as rash, pruritus edema, pruritus, and erythema as well as nausea, diarrhea, wheezing or anaphylaxis. Cross-reactivity to articaine has been reported in a patient with delayed hypersensitivity to prilocaine.

In general, patients with demonstrated hypersensitivity to articaine or other amides should receive an ester-group local anaesthetic for subsequent procedures.

The administration of large doses of articaine may produce methaemoglobinemia in patients with subclinical methaemoglobinemia.

Due to the content of epinephrine as a vasoconstrictor admixture, the following undesirable effects can occur

Cardiovascular disorders

Rare ($\geq 1/10,000$ to $< 1/1,000$)

Heat sensation, sweating, heart racing, migrainelike headache, blood pressure increase, angina pectoris disorders, tachycardias, tachyarrhythmias and cardiovascular arrest as well as acute oedematous thyroid swelling.

Due to the content of sulphite as excipient, the following undesirable effects can occur in very rare cases:

Allergic reactions or hypersensitivity reactions, particularly in bronchial asthmatics, which are manifested as vomiting, diarrhoea, wheezing, acute asthma attack, clouding of consciousness or shock.

Due to the content of both articaine and epinephrine, the following undesirable effects can occur

Nervous system disorders

2 weeks delayed onset of facial nerve paralysis has been described with articaine/epinephrine, the event still occur 6 months later.

PRESCRIPTION

Information shortened. For further details please refer to the Instructions for Use.

Date of revision of the text:

Ubistesin 1/100000 and 1/200000 October 2007

3M ESPE AG
 ESPE Platz
 D-82229 Seefeld, Germany

Summary of Product Characteristics

MEPIVASTESIN™

Active ingredient: Mepivacaine hydrochloride

COMPOSITION

1 ml solution for injection contains:

Active substance

Mepivacaine hydrochloride 30 mg

Excipients

Sodium chloride, Water for injections

CLINICAL PARTICULARS

Therapeutic indications

Infiltration anaesthesia and nerve-block in dentistry. MEPIVASTESIN is indicated for simple extractions as well as cavity and stump preparations. MEPIVASTESIN is especially suitable for patients to whom vasoconstricting additives are contraindicated.

Contraindications

Due to the local anesthetic ingredient mepivacaine, MEPIVASTESIN is not allowed to be used in the event of

- known allergy or hypersensitivity to local anesthetics of the amide type
- severe impairment of the nervous impulses and conduction system of the heart (e.g. grade II and III AV block, pronounced bradycardia)
- acutely decompensated cardiac insufficiency
- severe hypotension

Special warnings and special precautions for use

MEPIVASTESIN must be used with particular caution in the event of

- severe impairment to the renal or hepatic function
- angina pectoris
- arteriosclerosis
- injection into an inflamed area
- considerable impaired blood coagulation

Please note that with patients taking anticoagulants (e.g. heparin or acetyl salicylic acid), an inadvertent vascular puncture during injection may lead to severe hemorrhage, and the hemorrhage disposition is generally increased.

Erroneous intravascular application must be avoided.

Pregnancy and lactation

Pregnancy

There are no clinical studies regarding the application of mepivacaine hydrochloride during pregnancy. Animal studies have not provided adequate insights in view of possible effects of mepivacaine hydrochloride on pregnancy, embryofetal development, childbirth and postnatal development. Mepivacaine hydrochloride passes the placental barrier and reaches the unborn child.

As compared to other local anesthetics, when using mepivacaine during the first trimester of the pregnancy an increased risk of malformations cannot be excluded, during early pregnancy mepivacaine should only be used, if no other local anesthetics are available.

Lactation

It is unknown in which doses mepivacaine hydrochloride reaches the breast milk. If its application is necessary during lactation, breastfeeding may be resumed after about 24 hours.

Effects on the ability to drive and use machinery

In sensitive patients, the injection of MEPIVASTESIN may be followed by a temporary impairment of reactions, e.g. in traffic. The physician must decide from case to case whether the patient should be allowed to operate a motor vehicle or machinery.

Undesirable effects

Due to the local anesthetic ingredient mepivacaine, the following side effects can occur from the use of MEPIVASTESIN:

Milder central nervous symptoms involve metallic taste, tinnitus, dizziness, nausea, vomiting, restlessness, anxiety, initial increase in respiratory rate.

More severe symptoms are drowsiness, confusion, tremor, muscle twitching, tonicoclonic spasms, coma and respiratory paralysis.

Severe cardiovascular episodes are seen in the form of a drop in blood pressure, asystole, bradycardia, cardiovascular arrest.

Allergic reactions to mepivacaine are extremely rare.

PRESCRIPTION

Information shortened. For further details please refer to the Instructions for Use.

May 2005

3M ESPE AG

ESPE Platz

D-82229 Seefeld, Germany

XYLESTESIN™-A

COMPOSITION

1 ml solution for injection contains:

Lidocaine hydrochloride 20 mg
(R)-Epinephrine hydrochloride 0.015 mg
(equivalent to 0.0125 mg base)

Excipients:

Sodium sulphite max. 0.6 mg
(corresponding to 0.31 mg SO₂)
Sodium chloride, Water for injections

CLINICAL PARTICULARS

Therapeutic indications

Infiltration anesthesia and nerve-block in dentistry.

Contraindications

Due to the local anesthetic ingredient lidocaine, XYLESTESIN-A cannot be used in the event of

- known allergy or hypersensitivity to local anesthetics of the amide type
- severe impairment of the nervous impulses and conduction system of the heart (eg grade II and III AV block, pronounced bradycardia)
- acutely decompensated cardiac insufficiency (acute failure of cardiac output)
- severe hypotension (very low blood pressure)

Due to the content of epinephrine as a vasoconstrictor admixture, XYLESTESIN-A also cannot be used in the event of

- paroxysmal tachycardia or high-frequency, continuous arrhythmia
- pronounced coronary insufficiency
- severe hypertension (high blood pressure)
- thyrotoxicosis (hyperactivity of the thyroid)
- narrow-angle glaucoma
- decompensated diabetic metabolic condition
- pheochromocytoma
- concurrent treatment, or treatment during the past 14 days, with tricyclic antidepressants or monoamine oxidase (MAO) inhibitors.

Warning

XYLESTESIN-A must not be used in persons who are allergic or hypersensitive to sulphite, as well as in persons with severe bronchial asthma. In these persons, XYLESTESIN-A can provoke acute allergic reactions with anaphylactic symptoms (e.g. bronchospasm).

Special warnings and special precautions for use

XYLESTESIN-A must be used with particular caution in the event of

- severe impairment to the renal or hepatic function
 - angina pectoris (tightness in the chest)
 - arteriosclerosis (vascular sclerosis)
 - injection into an inflamed (infected) area
 - considerably impaired blood coagulation
- Erroneous intravascular application must be avoided!

Pregnancy and lactation

No sufficient studies of the use of XYLESTESIN-A during pregnancy are available for evaluating the safety of its application. Above all, during the early stages of pregnancy XYLESTESIN-A should be used only after careful consideration of the benefit-risk ratio.

A relevant transfer of the active ingredients to the breastmilk is not to be anticipated, as they are rapidly decomposed and eliminated.

Effects on the ability to drive and use machinery

In sensitive patients, the injection of XYLESTESIN-A may be followed by a temporary impairment of reactions, e.g. in traffic. The physician must decide from case to case whether the patient should be allowed to operate a motor vehicle or machinery.

Undesirable effects

Due to the local anesthetic ingredient lidocaine, the following side effects can occur from the use of XYLESTESIN-A:

Milder central nervous symptoms involve metallic taste, tinnitus, dizziness, nausea, vomiting, restlessness, anxiety, initial increase in respiratory rate.

More severe symptoms are drowsiness, confusion, tremor, muscle twitching, tonicoclonic spasms, coma and respiratory paralysis.

Severe cardiovascular episodes are seen in the form of a drop in blood pressure, asystole, bradycardia, cardiovascular arrest. Allergic reactions to lidocaine are most rare.

Undesirable effects which can occur due to the admixture of epinephrine as vasoconstrictor:

Symptoms such as heat sensation, sweating, heart racing, headache, blood pressure increase, anginal disorders, tachycardias, tachyarrhythmias and cardiovascular arrest cannot be ruled out.

SPECIAL WARNINGS:

Due to the content of anhydrous sodium sulphite, allergic reactions or hypersensitivity reactions can ensue in isolated cases, particularly in bronchial asthmatics, which are manifested as vomiting, diarrhoea, wheezing, acute asthma attack, clouding of consciousness or shock.

PRESCRIPTION

Information shortened. For further details please refer to the Instructions for Use.

Impresept™

Immersion Disinfectant

Impresept™ is a universal disinfectant for immersion of impression materials and trays.

Product Benefits

- For alginates, hydro-colloids, vinyl polysiloxanes, polyether and polysulfides
 - Active against bacteria, fungi and viruses like HIV, HBV and BVDV-Surrogate of HCV
 - DGHM certified and listed
 - Very good material compatibility
 - Ready-for-use solution
 - Short action time: 10 min.
 - Cleansing effect with the help of special surfactants
 - High user comfort – complete system
- **Action time for all impressions: 10:00 min.**

Impresept™ and Immersion Bath III

Item No.	Product Information
25125	Introductory Kit 6 x Impresept in foilbag, 1.1 litre each
	Refills
25040	1 Immersion Bath II for max. 6 impressions
25030	1 Immersion Bath III for max. 2 impressions (with sound signal)

3M™ Comply™

Indicator Tape

For a reliable identification of the sterilisation process.

Product Benefits

- For steam sterilization
- Excellent adhesion

Technical Data

Size of the indicator tape: 19 mm wide, 55 m long
Thickness of the crepe paper: 0.11 mm

3M™ Comply™ Indicator Tapes

Item No.	Product Information
1222-B	1 Roll Comply Indicator Tape for Steam Sterilisation

3M™ Face Masks

3M is a leading manufacturer of dental face masks and offers a complete line of fluid resistant face masks.

The masks protect the wearer from contamination by microorganisms. Different types of masks are available to suit different wishes and requirements.

Tie-On OP Mask (No. 1818)

- Fluid resistance
- Contains no fibreglass – no skin irritation
- Soft and comfortable

Elastic Band OP Mask (No. 2000 F)

- Fluid resistance
- Contains no fibreglass – no skin irritation
- Comfortable for the wearer

Aseptex Plus (No. 1942 FB)

- Fluid resistant moulded mask
- The outstanding moulded shape makes it one of the most comfortable masks on the market
- Contains no fibreglass – no skin irritation
- 2 layers
- 99% filtration efficiency
- Glasses do not fog up

Tie-On OP Mask (No. 1818)

Elastic Band OP Mask (No. 2000 F)

Aseptex Plus (No. 1942 FB)

3M™ Breathing Mask

This 3M™ breathing mask No. 8825 is intended for use in areas where the risk of infection is high or the respiratory tract is at risk. The German BG Institute for Safety at Work (BIA) generally recommends the use of breathing masks.

- Protection level FFP2 to protect against bacteria, fungi and spores
- Corresponds to EN 149, protection level FFP2
- High wearer comfort due to a soft foam sealing lip
- Mask has a large surface area, ensuring maximum filter performance while minimising the build up of heat inside the mask
- An expiratory valve reduces the resistance to breathing and thereby prevents the build up of moisture inside the mask

Breathing Mask (No. 8825)

CoJet™

Rocatec™ junior

RelyX™ Ceramic Primer

Page 112–113

Adhesive Repair and Pretreatment prior to Cementation

The CoJet™ system is an intraoral adhesive repair of defective veneering made of composite or porcelain. It is a simple and safe method for the intraoral repair of indirect restorations. CoJet™ enables the attachment of composite to ceramic and metal surfaces adhesively.

Indications

- Intraoral adhesive repair of defective veneering made of composite or porcelain
- Extraoral pre-treatment of inlays and onlays, veneers, crowns and bridges, pins and posts for adhesive luting

Product Benefits

- Long-lasting repair of defective veneering
- Reliable chemical bond between composites and all dental alloys
- Intraoral use of the 3M ESPE Rocatec system proven in veneering technology

CoJet™ System Set

Item No.	Product Information
68420	CoJet System Set 1 Microblaster CoJet Prep, 1 CoJet Sand 40 g, 1 Bottle 3M ESPE Sil 8 ml, 1 Bottle Visio Bond 2.5 ml, 1 Sinfony Opaquer Powder 5 g, Shade A3, 1 Sinfony Opaquer Liquid 8 ml
68421	Introductory Kit 1 CoJet Sand 40 g, 1 Bottle 3M ESPE Sil 8 ml, 1 Bottle Visio Bond 2.5 ml, 1 Sinfony Opaquer Powder 5 g, Shade A3, 1 Sinfony Opaquer Liquid 8 ml
	Refills
68411	3 CoJet Sand, 40 g each
68300	1 Bottle 3M ESPE Sil 8 ml
42614	1 Bottle Visio Bond 2.5 ml
47801	80 Single-Use Brushes
74088	1 Brush Grip for Single-Use Brushes
49620	1 Sinfony Opaquer Powder 5 g, Shade A3*
49860	1 Sinfony Opaquer Liquid 8 ml
	* further Shades see 3M ESPE Sinfony System
Caution:	Connectors and adapters necessary for the connection e.g. to the operatory unit are not included in the CoJet-System!

Rocatec™ junior

Coating System

Product Benefits

- The blasting module mixes the Rocatec-Plus into the air current uniformly, even at an operating pressure of only 2.8 bar
- The performance of the unit can be monitored and regulated perfectly with the easily legible pressure gauge
- As this unit includes a pressure reduction valve with integral water collector, it supplies compressed air free of water or oil to ensure that the Rocatec system operates reliably
- Due to the mobile format of the Rocatec junior it is easy to transport

Technical Data

- Dimensions: (W x H x D) 220 x 260 x 130 mm
- Weight: 2.200 g
- Compressed air: (max.) 10 bar
- Operation pressure: 2.8 bar

RelyX™ Ceramic Primer

Silane Coupling Agent

Indications

- Silanization of ceramic or metal restorations before cementation
- Silanization of ceramic or metal during repairs of ceramic works
- Chairside repairs of damaged ceramic crowns and blends

Product Benefits

- Enhances bonds to porcelain ceramic, composite and metal surfaces for improved performance
- Easy and simple handling

Polyether Bite Registration Material

Ramitec™ Penta™

Product Benefits

- **Fastest automatic mixer worldwide** – Mixes and dispenses Penta™ materials faster than any other automatic mixing unit
- **Faster work procedure** – Enables quick-setting materials and reduces stress for assistants
- **Smallest automatic mixing unit on the market** – Compact design saves valuable counter/wall space
- **Enhanced handling** – Handles more convenient and ergonomic with one-button operation from both sides of the unit, easier cartridge exchange and easy-to-attach mixing tips
- **Contemporary and robust design**

Technical Data

- Mixer shaft speed 380–760 rpm
- Rate of dispensing 150 ml/min.
- Extrusion force up to 6.500 N – electronically limited to 10.000 N (± 20%)
- Weight 9.8 kg
- Dimensions L 283 mm x W 225 mm x H 280 mm
- Wall mounting available

RotoMix™

Rotating Capsule Mixing Device

The RotoMix™ Capsule Mixing Device delivers a completely homogenous mix with the rotation mixing principle.

Product Benefits

- Rotating platform with simultaneously counterrotating capsule holder produces the most complete mix
- Automatic centrifugal cycle produces a denser mix and virtually void-free material
- Mixing time reduced by 30 % on average (compared with CapMix™)
- Easy loading/unloading of capsules
- Extremely quiet operation
- Touchpad features both pre-set (8 and 10 sec.) and programmable setting (1–39 sec.) for easy operation

Technical Data

Mixing speed: 2850 rotations per minute
Centrifugation speed: 2950 rotations per minute
Dimension: (W x H x D) 180 x 210 x 250 mm
Weight: 4000 g

76303	1 RotoMix – 230 V/50 Hz CH

CapMix™

Capsule Mixing Device

The CapMix™ Capsule Mixing Device is a practical capsule holder, which can be used with all types of 3M ESPE Mixing Capsules.

Product Benefits

- Touchpad features both pre-set (10 and 15 sec.) and programmable setting (1–39 sec.) for easy operation
- Extremely quiet operation
- With a user-friendly and easy-to-clean touchpad

Technical Data

Mixing speed: 4300 oscillations per minute
Dimension: (W x H x D) 195 x 160 x 195 mm
Weight: 3750 g

Elipar™ S10

LED Curing Light

reddot design award
winner 2010

To maximize efficiency, the Elipar™ S10 Curing Light offers all the features you want – and not ones you may never use. For polymerization of light-curing dental materials.

Product Benefits

- One-piece stainless steel casing is extraordinarily robust and easy to disinfect
- Unique ergonomic V-shape with simple two-button operation provides a comfortable grip from any angle
- With 1200 mW/cm² intensity you get up to 3 times more intensity at the clinically relevant distance of 7 mm*

Technical Data

Wavelength range: 430–480 nm
 Light Intensity: 1200 mW/cm² ±10 %
 (independent of battery power level)
 Power Supply: Lithium-ion battery

Handpiece:

Dimensions: (∅ x L) 28 x 270 mm,
 (1.10 x 10.63 in)

Weight: 250 g (0.55 lb) (incl. light guide)

Charger:

Dimensions: (L x W x H) 170 x 95 x 50 mm,
 (6.69 x 3.74 x 1.96 in)

Weight: 650 g (1.43 lb)

* compared to leading devices tested

Visio™ Alfa

Light Unit for 3M ESPE Sinfony™ Prepolymerization

Light unit for pre- and intermediate polymerization.

Product Benefits

- With the Visio Alfa, direct and functional layering becomes possible
- The proximity sensor automatically controls the light source, as soon as the object is positioned at the correct distance from the lamp
- Visio Alfa is suitable for all 3M ESPE light-cured composites, such as Sinfony™, Visio™-Form, Visio™-Bloc from 3M ESPE

Technical Data

Voltage: 230 V/110 V
 Dimension: (W x H x D) 81 x 270 x 320 mm
 Weight: 2800 g
 Lightwave length: 400–550 nm

Item No.	Product Information
77120	1 Visio Alfa Light Unit 230 V

Accessories and Spare Parts see page 120

Visio™ Beta vario

Light Unit for 3M ESPE Sinfony™ Polymerization

Light unit for final vacuum polymerization.

Product Benefits

- Polymerization in the Visio Beta Vario guarantees the strength and colour stability of Sinfony Veneers
- The mirrored polymerization chamber guarantees complete illumination and therefore deep and thorough polymerization
- Visio Beta Vario with three additional programs for versatile use
- The vacuum technique of Visio Beta Vario pump prevents the formation of a smear layer

Technical Data

Voltage: 230 V/110 V
 Dimension: (W x H x D) 360 x 135 x 280 mm
 Weight: 6400 g
 Lightwave length: 400–550 nm
