

Product Information | *Prophylaxis*

professional prophylaxis

The miradent range offers a comprehensive program for dental prophylaxis.

Especially in the product category “Special Dental Care” we continuously develop innovative products to meet the increasing demand of dental professionals and patients for comprehensive oral prevention.

dental aesthetics

The dental aesthetics range addresses the market for cosmetic dental care. Mirawhite gelée and Miraclin Implant, targets the customers’ desire for improved dental appearance. All product developments are strictly controlled to ensure only approved methods and selected ingredients are chosen.

medical care

The oral medical care range specialises in products for periodontal health, particularly for post-operative care following dental surgery. Most of the products (e.g. Miradont-Gel) have been used successfully in dental practices, and as prophylactic agents for many years.

Cleaning

Effective whitening

Rescue

Dear dental practice and pharmacy partners!

In recent years there has been a significant increase in severe gingival diseases in adults and seniors. The latest German Health Study shows that over 70 % of adults nowadays suffer from periodontal diseases. Additionally, in Germany more than 10 million teeth are extracted every year due to tooth decay or periodontitis. Many of these instances are avoidable through preventative self-administered prophylaxis and sound dental advice.

Today's experts agree that dental prophylaxis is based on four 'pillars':

- 'Tooth-friendly' diet
- Systematic dental care
- Fluoridation
- Regular dental check-ups

miradent by Hager & Werken is a range of high-quality professional prophylaxis products. Since the establishment of the miradent brand in 1982 we have been committed to research and innovation in the dental field. Our approach has led to the development and introduction of many innovative products, including those featured in this brochure.

Professional products require professional advice. For miradent, this means our products are being sold exclusively through dental practices and pharmacies, where highly-qualified staff can offer valuable advice.

This product information gives an overview of the miradent range. Please feel free to request additional copies to distribute to your customers.

Classic dental care

Professional prophylactic dental care requires more than just a toothbrush. Specific formulated mouthwashes and toothpastes are also essential components of a complete dental care to provide the best possible prevention of tooth decay.

Classic dental care – hypersensitive teeth

Open dentine tubules cause painful irritations

Sealed dentine tubules
 ● Potassium ions ● Hydroxyapatite

- ✓ 30 % artificial enamel (hap)
- ✓ Calming tooth nerve (potassium citrate)
- ✓ With xylitol and 1,450 ppm fluoride
- ✓ Low enamel abrasion, RDA 30

mirasensitive hap⁺®

Intensive care for hypersensitive teeth

The majority of all adults suffer from teeth sensitivity. Causes for such hypersensitivities are exposed tooth necks, natural enamel degradation, erosion and stress in the thin dentin layer near the enamel/cement border.

The recently developed hap⁺ dual complex fights the above mentioned degradations. The substance complex consists of 30 % artificial enamel (hydroxyapatite) and includes 5 % potassium ions to calm the tooth nerve itself. The artificial enamel seals the open dental tubuli, stopping the stimuli conductor to the tooth nerve. At the same time the potassium ions surround the toothnerve with a protective layer. This dual complex provides long-term protection against hypersen-

sitivity. mirasensitive hap⁺ contains fluoride (1,450 ppm) and xylitol which is known for its anti-plaque, tooth decay preventive and remineralising effects.

Preliminary studies confirm the effectiveness of mirasensitive hap⁺. After just one week of application, the build-up of artificial enamel becomes clearly visible. The low RDA value (30) supports a gentle dental care, minimising the abrasion of tooth enamel.

Design	REF
mirasensitive hap ⁺ , 50 ml	630 169

Classic dental care – toothpaste

- ✓ Cleans teeth and gingiva
- ✓ Prevents tooth decay
- ✓ Strengthens enamel
- ✓ Low enamel abrasion RDA 17

Mirafleur® C

High-quality amine fluoride toothpaste for optimal tooth decay prevention.

Amine fluoride compounds have significant plaque-reducing characteristics. The use of mirafleur amine fluoride toothpaste (1,250 ppm) increases fluoride concentration in saliva and inhibits tooth decay development. Using Mirafleur C toothpaste, amine fluorides spread in the oral cavity rapidly, cover the tooth surfaces evenly with a homogenous molecular layer and distribute the fluoride where it is needed. The film-like consistency creates a layer on the teeth which stops the fluoride from being washed out quickly by saliva.

Toothpaste with amine fluoride

Dosing cap
For an optimal dosage of the mouth rinsing solution

- ✓ Free of alcohol
- ✓ Reduces fur on tongue
- ✓ With xylitol

mirafleur® chx

Anti-bacterial mouth rinse solution with 0.06 % chlorhexidine digluconate and 250 ppm fluoride

mirafleur chx is a ready-to-use mouth rinse solution with 0.06 % chlorhexidine digluconate (CHX) for cleaning, care and protection of the oral cavity. The solution also contains a light fluoridation (250 ppm) and caries-preventive xylitol. In addition, the solution consists of hamamelis, a medicinal plant used by the North American Indians against inflammation but also for diarrhoea, dysentery and mucous discharges. mirafleur chx does not contain alcohol and enjoys widespread acceptance. mirafleur chx is ideal for the prevention of bad breath, plaque, cervical tooth decay and gingival inflammations.

Design	REF
mirafleur chx, 100 ml	630 085
mirafleur chx, 500 ml	630 086
paroguard, 200 ml	630 087

paroguard®

Professional mouth rinse solution with 250 ppm fluoride

Each key ingredient provides a unique benefit:

- **Chlorhexidine** inhibits the development of bacteria while decomposing and preventing plaque
- **Hamamelis** prevents inflammation
- **Xylitol** is non-cariogenic, prevents tooth decay and acts pH neutrally
- **Fluoride** remineralises, increasing resistance against tooth decay and enhancing the effect of chlorhexidine

Hamamelis virginiana

The combination of ingredients also leads to a significant reduction of sulphurous methyl compounds on the dorsum (tongue coating!) and, therefore, prevents heavy halitosis.

Classic dental care – Sonic toothbrush

- ✓ 30,000 micro-vibrations per minute
- ✓ 8 x faster than traditional elec. toothbrushes
- ✓ With integrated tongue scraper

With integrated tongue scraper

30,000 micro vibrations per minute

Prosonic micro 2

Sonic toothbrush for on the way

The Prosonic micro 2 is a low-priced, battery-powered sonic toothbrush, suitable for travel, and granting a thorough oral hygiene. The toothbrush cleans effectively with 30,000 vibrations per minute. Bacteria, plaque and tartar get optimally removed due to the micro-vibrations. The back of the brush head serves as a tongue scraper that reliably removes bacterial coating – a major cause of bad breath.

The Prosonic micro 2 is operated with a battery that can be easily replaced, granting a use of more than

30 days. Thus, the Prosonic micro 2 is ideal for daily use, on travel and for people with restricted mobility. The refill brushes can be identified by color-coded rings.

Design	REF
Prosonic micro 2	630 182
Brush head, set of two (medium)	630 183

- ✓ Rubber lamellas for thorough cleaning
- ✓ Bended brush head
- ✓ Anatomic anti-slip grip

Carebrush® white

Toothbrush with “whitening” effect

The Carebrush white combines the advantages of a conventional toothbrush with the technology of professional tooth cleaning. The conventional criss-cross bristles clean your teeth and interdental spaces. The bended brush head provides better access to the hard-to-reach molars. The cleaning effect of the rubber lamellas is similar to the effect obtained by using polishing cups in professional tooth cleaning. The tooth surface is cleaned gently and carefully, the tooth discoloration is thoroughly removed. As a result, the natural whiteness of the tooth is restored. The anatomic handle with rubber nubs provides a safe anti-slip grip.

Design	REF
Carebrush white, green	630 190
Carebrush white, pink	630 191

- ✓ Gentle and thorough cleaning
- ✓ Silky-soft micro bristle
- ✓ Anatomic anti-slip grip

Carebrush® supersoft

Toothbrush with silky-soft micro bristles

Exposed tooth necks and irritated gums require a particularly intensive oral care. The Carebrush supersoft has extra soft bristles, providing gentle and thorough cleaning of the hypersensitive exposed tooth necks, without compromising on the usual dental care. The anatomic handle with rubber nubs provides a safe anti-slip grip.

Design	REF
Carebrush supersoft, blue	630 195

Classic dental care – for in between

- ✓ Bristles impregnated with toothpaste
- ✓ Fresh mint flavor
- ✓ Ideal for on-the-go

Impregnated bristles
Ready-to-use with toothpaste already contained in the bristles

No Water needed

Happy Morning®

Prepasted and self-foaming toothbrush

Many years ago, Happy Morning was the first single-use brush on the German market. Since then it has continuously been modified and improved. The Happy Morning toothbrush with its short brushhead, allows for an easy access to the lateral tooth area. Dentists have always known and been convinced of Happy Morning; the toothbrush has impregnated bristles with toothpaste. It is ready-to-use and suited for on-the-go, in the dental practice before treatments or for traveling.

Further product advantages:

- Instantly usable
- Short brush head, 2,5 cm
- Hygienically, individually wrapped

Design	REF
Happy Morning, trans. blue with toothpaste, 100 pcs.	605 401
Happy Morning, trans. white with no toothpaste, 100 pcs.	605 403

In between meals

At work

When travelling

Before a date

No water needed

- ✓ Bristles impregnated with toothpaste
- ✓ With xylitol
- ✓ Anti-plaque effect

Happy Morning® Xylitol

Self-foaming toothbrush with xylitol

The new Happy Morning Xylitol is a single-use toothbrush with toothpaste containing xylitol. The special feature of xylitol – a natural sugar substitute – is its inhibitory effect on plaque-forming bacteria and acid. Tooth brushing with xylitol toothpaste prevents the deposition of plaque on the tooth surface and contributes to the tooth decay prevention. The outside boxing also serves as an attractive display.

Same product advantages as Happy Morning, plus:

- Bristles impregnated with toothpaste containing xylitol
- Xylitol for additional "anti-plaque" effect, inhibiting plaque and acid-forming bacteria

Design	REF
Happy Morning Xylitol, 50 pcs.	605 496

Interdental cleaning

Interdental spaces, braces, brackets and bridges are particularly vulnerable to bacteria and debris on the teeth. They are also hard to clean as the spaces are small and difficult to reach. Products for cleaning these hard to reach spaces are essential for effective prophylactic care.

Optimal interdental care

- ✓ High-quality floss
- ✓ Optimal interdental care
- ✓ Floss in 3 versions

Mirafloss®

High-quality dental floss for optimal interdental care in three versions

Dental floss is a must for cleaning narrow interdental spaces.

Mirafloss chx-Tape allows chlorhexidine (CHX) to directly reach interdental spaces. CHX is clinically proven* to inhibit plaque build up and to prevent tooth decay from developing.

Mirafloss Tape is not a common floss. It is not waxed, but PTFE-coated. It easily slides into even the tightest interdental spaces. The tape “expands”, once brought into the interdental spaces, cleaning extremely effectively. It is extremely tear-resistant and does not fray.

Design	REF
Mirafloss chx-Tape, 20 m	630 078
Mirafloss Tape, 20 m	630 022
Mirafloss unwaxed, 20 m	630 077

Mirafloss unwaxed is a classical unwaxed dental floss, ideal for the thorough cleaning of large interdental spaces where it can be inserted very easily. Mirafloss chx-Tape, Mirafloss Tape and Mirafloss unwaxed are tear-resistant and will not fray.

Interdental cleaning – dental floss holder

- ✓ Easy to use
- ✓ With toothpick function
- ✓ Hygienic storage box

Easy handling

With toothpick function

Floss holder

The floss holder ensures the floss is tightly stretched

Pick function

The pointed end of the handle can be used as a toothpick

Zahnpick®

Combination of dental floss and toothpick

Dental floss is extremely important for cleaning narrow interdental spaces. However, many consumers find flossing very inconvenient. Zahnpick solves the problem.

Zahnpick is:

- A toothpick to remove coarse food residues
- Dental floss to remove plaque and fine food debris

Design	REF
Zahnpick, 30 pcs.	630 039
Zahnpick, 100 pcs.	605 637

Zahnpick is the convenient combination of a dental floss and a toothpick – perfect for easy, comfortable interdental care. Fine, unwaxed floss is conveniently fixed on a small holder, and the handle makes it easy to floss all areas including the hard-to-reach molars. In addition, the end of the handle can be used as a toothpick.

Storage in a reclosable box

Interdental cleaning – interdental brushes

CHX impregnated

CHX gets applied directly into interdental spaces and supports the anti-plaque effect

Flex-Head

Patented system allows flexible angle adjustments of the brush head

- ✓ Adjustable angles
- ✓ Ideal on-the-go
- ✓ Available in 6 sizes

Protective cap can be used as handle extension

I-Prox® chx

Interdental brushes with hygienic protective cap and convenient flex-head

Although you clean your teeth in the morning and in the evening you might quite often feel an urge to clean your interdental spaces, probably following each meal and in between. Compared with toothpicks and other tools, interdental brushes offer not only a very gentle but also a much more efficient way to clean your interdental spaces. The flex-head makes it easy to access hard-to-reach areas.

I-Prox chx – high-quality interdental brushes made of a special wire with ultrafine chx-impregnated bristles and a protective cap. This guarantees not only a thorough oral hygiene but also makes it the perfect interdental brush when travelling.

Interdental cleaning – sulcus cleaning

- ✓ Thorough and gentle cleaning
- ✓ Storage compartment
- ✓ Set with 4 brushes

① V-shape

The pointed bristle cleans the periodontium thoroughly, effectively and gently

② Switch function

The switch function allows two comfortable angles for cleaning different areas

③ Brush storage

Hygienic storage for refill brushes

I-Prox® P

Contains sulcus brush and four brushes

Neither toothbrush nor floss or interdental brushes clean every part of the mouth, such as:

- Sensitive exposed gingiva
- Gingival pockets
- Prosthetic works (bridges, crowns, implants, etc.)

The miradent sulcus brush with its finger-grip handle however, thoroughly and gently cleans areas that can neither be reached by toothbrush nor interdental brush. The exchangeable brushes are V-shaped and can be stored in the back of the holder.

Applications

Removal of debris

- ✓ Gentle and effective cleaning
- ✓ Removal of debris
- ✓ Easy home check-up

I-Prox® Care Set

Interdental care set

For a complete cleaning of the oral cavity the combined use of the pointed I-Prox P brush and the double-ended toothscraper I-Prox C is advisable. This way, even hard-to-reach areas can be cleaned from debris gently. Following the cleaning process, the anti-fog coated mouth mirror makes it easy to control the mouth cavity.

All above-mentioned products are now available in a convenient interdental care set.

Design	REF
I-Prox Care Set, trans. blue	630 160

Plaque detection

Dental health starts with thorough and regular dental care at home! However, even with disciplined brushing and flossing some areas might be missed. Professional prophylaxis products allow patients to easily detect plaque at home.

- ✓ Easy to use
- ✓ Two-color indication
- ✓ Free of erythrosine

Bite

Reaction

Check

Mira-2-Ton
Patented two-color reaction with plaque to reveal older (blue) and newer (pink) plaque

Separation mark
For children half a tablet serves for one test

Mira-2-Ton®

Plaque disclosing tablets for up to 12 tests

The miradent plaque test has been used in dental practices for many years. The tablets detect plaque: Older plaque is revealed in blue, newer plaque in pink. To use, chew one tablet (for children half a tablet), swirl around in the mouth with saliva, then spit out to check for plaque deposits. Discoloration can be removed by brushing teeth. miradent plaque disclosing tablets are free of erythrosine.

- ✓ Ideal for home check-up

Anti-fog
Anti-fog coating optimises analysing all parts of the mouth

Octagonal ergonomics
Anatomically shaped handle for comfortable and accurate use

miradent® Mundspiegel

Anti-fog mouth mirror

A mouth mirror is indispensable for professional dental cleaning. Just like dentists depend on a mouth mirror for diagnosis in the practice, it is the only reliable way for checking your mouth at home. It is very difficult to locate problems and fight them effectively without one!

Design	REF
miradent Mundspiegel, trans. blue	630 065
miradent Mundspiegel, trans. pink	630 066

The miradent mouth mirror has an angled, flat design to reflect every detail within the oral cavity.

- ✓ Plaque control
- ✓ Fruity bubble gum flavor
- ✓ Free of erythrosine

Apply
Rinse mouth with 10 ml for 30 seconds and spit out. Do not swallow!

Check
Plaque deposits are revealed in blue.

Remove
Brush thoroughly with toothpaste to remove the blue color.

Plaque Agent®

Plaque disclosing mouth rinse, erythrosine-free

Being on the track of plaque deposits!

The Plaque Agent mouth rinsing solution is a quick and easy way to help children see plaque deposits. It is fun to use and motivates children to brush and care for their teeth properly. It should ideally be used before brushing. The solution colors plaque deposits blue. The colored spots can then be removed by targeted brushing.

With a great 'bubble gum' taste, this product is popular with children and can help them understand the need for thorough daily dental care.

Design	REF
Plaque Agent, 500 ml	631 096

To use, the child rinses its mouth with 10 ml of Plaque Agent (one dosing cap) for 30 seconds. After spitting out, the plaque deposits will be blue, demonstrating which teeth require better brushing. The blue color can be easily removed with a children's toothpaste. Plaque Agent may be used again to check the brushing results. There should no longer be any discolorations. Otherwise, the deposits are most likely old and should get removed by a dentist. Children may need help with mouth rinsing and parents should supervise the use of Plaque Agent.

Cosmetic dental care

Brilliant white teeth make a face look younger and more radiant. Teeth discoloration can be removed quite easily with our range of cosmetic products. Their use can significantly improve a person's smile and appearance.

- ✓ Effective whitening
- ✓ Removes discolorations
- ✓ Immediate illuminating effect

Mirawhite® gelée

For brilliant white teeth

With its innovative complex, Mirawhite gelée provides full protection. It gently removes tooth discoloration and actively supports regaining and keeping the natural teeth whiteness. Superficial tooth discoloration and deposits are removed by brushing the teeth, while further ingredients prevent a quick, reoccurring bacteria adhesion. The formation of tartar is reduced significantly.

A covering translucent layer is achieved by Mica, a mineral that has successfully been used for many years in cosmetic products. It makes the teeth feel noticeably smoother and gives them a vital, shiny effect which is immediately visible. The gelée does

not contain any nanotech material.

Mirawhite gelée has a bright blue color and a refreshing mint taste. It should be applied twice daily. It contains caries-preventive sodium fluoride (fluoride 1,450 ppm) and xylitol.

Design	REF
Mirawhite gelée, 100 ml	630 123

Cosmetic dental care – toothpaste for dental implants

- ✓ Ardox-X whitening technology
- ✓ Avoids differences in color
- ✓ Enamel remineralization

Safe Implant

Miraclin Implant

Toothpaste for people with dental implants

One of the most exclusive restorations in the field of prosthetic dentures is a dental implant. Special care is required to maintain implants as long as possible, at best lifelong. Miraclin Implant has been developed to meet the needs of people with dental implants. Teeth, implants and gums are being cleaned thoroughly, while the Ardox-X technology preserves your teeth's natural whiteness, avoiding differences in color between natural teeth and implants. In combination with lactoferrin – an endogenous protein – Miraclin Implant unfolds all-round protec-

tion, supporting the regeneration of damaged cells along the implant. Additionally, Miraclin Implant avoids gum recession effectively, protects the implant against external influences and maintains the implant's stability. All mentioned factors being essential for the long-lasting maintenance of an implant. Remineralization and protection of the enamel are obtained by sodium fluoride (200 ppm F).

Design	REF
Miraclin Implant, 100 ml	630 165

- ✓ Increases the saliva flow
- ✓ Plaque-inhibiting and tooth decay-preventive
- ✓ Strengthens the enamel

Aquamed®

Lozenges against mouth dryness

Are you aware of the fact that over 25 % of all adults are affected by mouth dryness? Mouth dryness is more than just an unpleasant feeling. It can lead to diseases, inflammations and even cause the loss of teeth. The following are known symptoms for mouth dryness: Dryness of the mucosa, difficulty in chewing or speaking, bad breath, intolerance of dentures, inflammations inside the mouth, chapped lips.

Mouth dryness (Xerostomia) is caused by a salivary gland subfunction. The average unstimulated saliva flow of an adult is 0.25 – 0.35ml/min. Reduced saliva flow also causes a loss of important minerals such as calcium and phosphate. Consequently, the lost minerals cannot be re-absorbed by the enamel. This may result in developing tooth decay as the saliva loses its natural protective mechanism, resulting in decreased neutralization of food residue and acids.

**Sugarfree • No Aspartam • No Gluten
No Lactose • No Fructose • No GMO**

The absence of the natural protective mechanism provides bacteria with perfect condition to build coatings (plaque) unhindered. The saliva's over-acidification inevitably results in erosion damage on the tooth surface. The miradent Aquamed lozenges have been developed in cooperation with dental experts and meet the need of people suffering from mouth dryness. Beside the helpful enzyme (Lysozyme), the formula also includes calcium lactate, supporting the enamel's remineralization. The Aquamed mouth dryness lozenges are 100 % sweetened with natural xylitol which is well known for its plaque-inhibiting and tooth decay-preventive properties.

- ✓ Fights halitosis
- ✓ With xylitol
- ✓ Free of alcohol

halitosis spray

Instant fresh breath spray

Fresh breath is essential to feel comfortable and confident towards other people. In most cases, bacteria colonising on the tongue are the main cause for bad breath. In such cases, even frequent tooth brushing cannot prevent bad breath. The combination of selected essential oils and flavors and the special formulation guarantees immediate and long-lasting fresh breath. miradent halitosis spray fights volatile sulphur compounds produced by bacteria. The ingredient xylitol is known for its tooth decay preventive and remineralising effects and perfectly supports daily dental care. The

integrated pump mechanism makes an accurate application onto the upper surface of the tongue easy. Perfectly to be used on the go. miradent halitosis spray is free of alcohol and has a refreshing minty flavor.

Use:

When needed, give 1 – 4 sprays directly onto the upper surface of the tongue. For optimal results additionally clean the surface prior with the Tong-Clin De Luxe tongue cleaner.

Cosmetic dental care – tongue cleaning

Slim technology
 Extra flat and angled
 cleaning head.

Concave scraper
 Bended scraper for
 an easy use

Tong-Clin® De Luxe

Tongue cleaner for removing bacterial coating and preventing halitosis

In 90 % bad breath originates from within the mouth and studies* have shown that usually bacterial coatings on the tongue are responsible. These coatings disturb the sensitive bacterial balance, support the formation of plaque, and it can affect the sense of taste. It is both, unhygienic and uncomfortable to remove these tongue coatings with a standard toothbrush.

The miradent tongue cleaner, with its finger grip handle, is particularly effective due to its short bristle field. In combination with the bristle field, the coatings are lifted and removed gently by the concave scraper. The angled and thin head reduces the gag reflex.

Xylitol range

Since its discovery, xylitol, a naturally healthy sugar substitute, has continually been taking on greater significance. Xylitol is a natural component found in fruits and vegetables which provides a true alternative for consumers enjoying sweet specialties while focussing on a balanced diet. Please consider current health claims in professional counselling.

Xylitol range – Xylitol Powder, natural sweetness

- ✓ Toothfriendly
- ✓ Re-mineralising
- ✓ Balanced diet
- ✓ GMO-free
- ✓ 1:1 sweetening power

Xylitol Powder

100 % natural sweetness

Xylitol is a natural sugar substitute without the disputed properties of conventional sugar and artificial sugar substitutes. An important aspect is its tooth-friendly properties. The bacteria inside the mouth cannot feed on xylitol. As a result, it sustainably inhibits the formation of dental plaque.

Xylitol Powder is a natural substance also found in fruits and vegetable fiber. Therefore, it is an ideal alternative for millions of consumers, who like sweets, but focus on a balanced diet. Xylitol has the same sweetening power like household sugar, but 40 % fewer calories. The uses are varied: To sweeten hot and cold drinks, fruits, muesli or for baking.

Excessive consumption may have laxative effects.

Sweetening power of xylitol versus other sweeteners:

Xylitol range – Xylitol Chewing Gum / Xylitol Chewing Gum for Kids

Did you Know?

Chewing gum sweetened with 100 % xylitol has been shown to reduce dental plaque. High content/level of dental plaque is a risk factor in the development of caries in children.

Green Tea

Cinnamon

Fresh Fruit

Spearmint

Peppermint

Cranberry

Ideal dental care without aspartame and fructose

Recommended daily allowance:

Adults 5 – 7 pcs., children 3 – 4 pcs.

Excessive consumption may have laxative effects.

Xylitol Chewing Gum for Kids

New child-friendly, refreshing taste of apples or strawberries

Ingredients Spearmint, Peppermint, Cinnamon: sweetener: xylite, gum base, flavor, thickening agent: gum arabic, humectant: glycerin, emulsifier: **soy lecithin**, coloring agent: titanium dioxide, coating agent: carnauba wax.

Ingredients Fresh Fruit, Cranberry: sweetener: xylite, gum base, flavor, thickening agent: gum arabic, humectant: glycerin, acidity regulator: malic acid, emulsifier: **soy lecithin**, coloring agent: titanium dioxide, coating agent: carnauba wax.

Ingredients Green Tea: sweetener: xylite, gum base, flavor, thickening agent: gum arabic, humectant: glycerin, leaf extract (green tea), emulsifier: **soy lecithin**, coloring agent: titanium dioxide, coating agent: carnauba wax.

Ingredients Apple and Strawberry: sweetener: xylite, chewing base, aroma, acidity regulator: malic acid, thickening agent: gum arabic, humectant: glycerine, colourant: titanium dioxide, emulsifier: **soya lecithin**, coating: carnauba wax.

Xylitol Chewing Gum

Dental care chewing gum in a re-sealable box (30 pcs.)

If consumed regularly, miradent chewing gums with xylitol sustainably reduce the formation of plaque on the tooth surface. If tooth brushing after the meal is not possible, our xylitol chewing gums are an ideal alternative to do good and to protect your teeth. We focus on high-quality raw materials and, therefore, entirely dispense with aspartame and sorbitol. Of course, the xylitol is won without the use of gene technology. The chewing gums are vegan – and free of gluten, lactose and fructose.

- ✓ Caries-preventive
- ✓ Remineralizing
- ✓ Dental plaque inhibiting

Xylitol Drops

The tooth-friendly lozenges

miradent Xylitol Drops have specially been developed for an extended all-day oral care. The tooth surfaces benefit from the sugar substitute xylitol as it supports the re-storage of mineral components depleted from the teeth. In consequence it helps hardening the teeth surfaces, giving them better protection against food acids. The sweet miracle also scores with its tooth decay preventing properties: Oral bacteria cannot feed

on xylitol. Therefore, it prevents the forming of dental plaque, significantly reducing the build-up of tooth decay. The consumption of the drops leave your teeth feeling pleasantly smooth and clean.

Xylitol Drops have a slightly refreshing taste and are available in three flavors: Melon, Mint, Cherry

Specialties

Professional prophylactic dental care requires more than just a toothbrush and toothpaste. Our range of specialised products adapted for particular conditions includes dental chewing gums, denture brushes and tongue cleaners. These are essential components of complete dental care.

- ✓ Against aphthae and lichen
- ✓ Quick relief
- ✓ Inhibition of bacteria

Miradont®-Gel

Micro nutrition gel for oral medical provision

Miradont-Gel is an innovation in wound treatment beyond conventional medicine. By developing its positive, physical mechanism of action, the micro-nutrient gel helps healing oral wounds. Its unique formula eases painful inflammations quickly and inhibits bacterial reproduction.

Miradont-Gel is useful in many dental applications:

- For pain relief in:
 - Aphthae and lichen
 - Irritations of the mucosa
 - Herpes lesions
 - Pressure spots caused by prosthetics
 - Revitalising following dental treatments

Miradont-Gel contains a unique formula of micro nutrients, vitamins, herbal supplements, and the body's own trace elements.

Inflammations can cause a deficiency of micro nutrients and vitamins in the tissue. Miradont-Gel allows these important elements to be directly applied to the inflamed areas to compensate. In addition, bacteria are inhibited by trace elements, such as zinc which chemically repels bacteria away from cell openings and membranes. This enables the body to revitalise inflammations naturally.

Prosthetic restorations

Efficient mouth hygiene is essential for everyone, especially at an older age as it also improves quality of life. Special age-adjusted products like implant floss or denture brushes are an important part of comprehensive dental care. A denture brush removes deposits reliably, thus preventing the accumulation of bacteria.

- ✓ Two bristle fields
- ✓ Finger-grip handle
- ✓ 2 colors available

Octagonal ergonomics

Ergonomically shaped large handle for safe and easy handling in case of limited hand movement (e.g. gout)

Protho Brush® De Luxe

Denture brush with an ergonomic finger-grip handle

Care of dentures is very important as food deposits and bacteria adhere particularly well to dentures and their attachments. This can lead to plaque, gingival diseases and damage to the jaw-bones, affecting both, the fit and comfort of dentures. Poor care can also result in unpleasant halitosis.

The miradent Protho Brush is a well-thought-out product: With its large, ergonomic finger grip handle it has been designed for easy handling, especially for older people. The large bristle field is for cleaning the outer denture surface. The V-shaped smaller bristle field perfectly cleans the hard-to-reach inner denture surfaces.

Prosthetic restorations – box for storing dentures

- ✓ Waterproof box
- ✓ With denture brush and mirror
- ✓ Ideal on-the-go

Brush
With two different
bristle fields

Locking mechanism
Enables water-tight sealing

Protho Box®

For storage and cleaning of prosthetic restorations

Keeping dentures safe can be difficult, especially when travelling. The Protho Box solves this problem as it is ideal for storing dentures safely. The Protho Box is completely waterproof, allowing dentures to be stored in a cleaning solution without the risk of leakage.

The bristle compartment contains a small, ergonomically shaped denture brush with large white bristles for cleaning the outer surfaces of the denture, and small black bristles for the inner surfaces. Cleaning tablets may also be stored in this compartment. The box features a mirror to assist when re-inserting prosthetic works.

Single replacement brush	605 901

Prosthetic restorations – fleecy floss

Parodontal floss
Fleecy material for thorough removal of plaque, 15 cm long

Stiff ends
Facilitate threading

- ✓ For implants and bridges
- ✓ With anti-plaque effect
- ✓ Antibacterial

Mirafloss® Implant chx

Antibacterial CHX floss fibers from the roll

Mirafloss Implant chx offers fleecy floss “from the roll”. The dispenser includes 50 floss fibers, which can easily be separated by the tear-off edge. The stiff endings facilitate threading. Implants and bridges can ideally be cleaned with the fleecy center part, which is saturated with 0.2 % chx. Chlorhexidine has an antibacterial effect and inhibits plaque bacteria.

Product advantages:

- Floss fibers in handy dispenser
- Antibacterial chx
- Two thicknesses:
fine (Ø 1.5 mm) and medium (Ø 2.2 mm)

Mirafloss Implant chx, 50 pcs., medium (blue)	630 135

Kids' Corner

Children's toothbrushes, like our Kid's Brush, have proven to motivate for an independent dental care. Children should clean their teeth on their own starting from the age of four. Usually this is supported with programs in kindergartens and elementary

schools. However, parents also need to be involved to ensure good habits are formed at an early age. Our Kid's product range supports children to learn and enjoy a daily dental care routine.

1 Bristle field
Extra soft bristles
avoid injuries

2 Teething ring
Handle with nubs acts
as a teething ring and
enhances dentition

- ✓ Extra soft bristles
- ✓ With teething ring
- ✓ No risk of swallowing

Infant-O-Brush®

Infant toothbrush and teething ring

“The sooner the better” – this is particularly important in dental care. The miradent infant toothbrush is suitable for toddlers from as young as three months old. The bristles are extra soft and gentle on the gums and mouth in order to avoid injuries. The brush also serves as an oval teething ring which ensures safe and fun use while eliminating the risk of swallowing the brush.

Knocked out teeth or tooth fragments...

... MUST NOT BE CLEANED!

miradent SOS Dentobox®

Tooth rescue box

Sports activities or children's play time can lead to accidents in which a tooth breaks or falls out. Time is then of utmost importance for a successful replantation. The SOS Dentobox is an innovative way to prolong the life of broken or avulsed teeth, increasing the chance of successful replantation. It contains a patented, ready-for-use nutrient solution to protect the tooth cells. The tooth or tooth fragment can be stored safely in this solution for up to 48 hours, protecting it until it arrives at the dental surgery.

Statistically speaking, children have the most tooth accidents. We recommend that the SOS Dentobox should be available in all kindergartens, schools, sports facilities, public swimming pools and also in every first aid-kits in your car and at home. Better safe than sorry.

- ✓ Ready for immediate use
- ✓ Safe storage up to 48 hours
- ✓ Replantation of avulsed teeth
