SYBRONENDO PRODUCTS

Dear Clinician,

Our purpose as an organization is to assist the clinician in the preservation of natural dentition and the elimination of patient pain. How do we do that? By providing you with the safest files and superior filling methods.

When clinicians talk, SybronEndo listens. Our doctors requested a rotary Niti file that separated less than the competition, cut better and was more flexible. After several years of research and development our engineers created a file that delivers everything our customers asked for. Twisted Files (TF) are strong enough to cut ideal file paths confidently, yet flexible enough to do it efficiently. TF launched last year and is the most significant endodontic innovation in many years. It continues to break all sales records for new product introductions in our company's storied history. Now in this version of our catalog we are introducing TF in larger tip sizes to enhance the shaping of apical anatomy. To learn more visit [TFwithRPhase.com](http://TFwithRPhase.com).

On August 1, 2008 Pentron Inc. joined the Sybron Dental Specialties family. The crown jewel of Pentron is Resilon, a synthetic alternative to gutta percha which has demonstrated through clinical review and scientific investigation to be superior to gutta percha. So whether you buy RealSeal or Epiphany brands you have a single source for this innovative obturation material.

SybronEndo recently launched RealSeal 1 Bonded Obturators (RS1), made with Resilon technology which is the next generation in carrier-based filling for the root canal. All the components of RS1 — sealer, filler and core — are resin-based materials and bond with each other to form a superior seal inside the patient's tooth. This seal is important for the patient because it keeps bacteria from re-infecting the tooth and enabling results that can potentially last a lifetime. Clinicians like RS1 because it is easy to use and increases the likelihood of patient satisfaction by reducing the chances of a failed root canal. Endodontic specialists like it because it is easier to retreat than competitive products and the dual radiopacity enables them to see the core/material interface on their diagnostic radiograph. Go to [SuperiorFills.com](http://SuperiorFills.com) for additional information on RS1. This is an exciting time to be involved in endodontics. Let us assure you we are already working on the next generation of endodontic technology to keep your practice on the cutting edge. Look for those advancements in the next edition of the best catalog in Endodontics.

We thank you for your ongoing support.

Sincerely,

Shawn Potter, Vice President of Marketing

## DIAGNOSTICS

The first step to a successful root canal preparation is to find out as much information about the tooth as possible. The SybronEndo Diagnostic line is second to none in this arena. Anchored by our innovative Elements Apex Locator, our diagnostic equipment provides the standard by which all others are measured.

## ELEMENTS™ DIAGNOSTIC UNIT AND APEX LOCATOR

When you're doing a root canal, you need to get to the point – the apex – predictably, efficiently and accurately. This technology optimizes earlier engineering to give you the most precise reading available today. What's more, the satellite display, which you can place on the instrument tray, the microscope, the patient's bib or anywhere else you choose, brings critical data into your field of vision.

## FEATURES AND BENEFITS

- Auto-power off conserves battery life
- Full-range audio speakers eliminate annoying beeps
- Nonglare tilt screen with digital and graphical feedback
- Autoclavable medical-grade cords and connectors
- Probes are gold plated to resist micro-corrosion
- Automatic calibration for a more accurate diagnosis
- Advanced battery technology for longest life between charges
- Vitality Scanner provides pain-free electric pulp testing and accurate analysis in the presence of EDTA, sodium hypochlorite, blood, saline, water and hydrogen peroxide

MINI APEX LOCATOR 973-0280

MINI APEX LOCATOR

SybronEndo's Mini Apex Locator delivers the power of apex location in the palm of your hand and offers a new level of accuracy at an affordable price.

## A NEW PARADIGM IN CANAL SHAPING

*The Twisted File is the endodontic equivalent of man stepping on the moon. Yes, it is breakthrough technology. But more than that, it presents a new paradigm in canal enlargement.*

— Richard Mounce, DDS, Vancouver, Washington

## A QUANTUM LEAP IN FILE DESIGN AND MANUFACTURING

The Twisted File is the first and only file to combine three unique and proprietary processes to deliver optimal strength and flexibility:

### R-PHASE HEAT TREATMENT TECHNOLOGY

This proprietary technology is used to optimize the molecular phase and properties of nickel titanium (NiTi). The resulting crystalline structure modification, which has been shown to be finer than traditionally-processed materials<sup>1</sup> maximizes flexibility and resistance to breakage.

### TWISTED DESIGN, NOT GROUND

Twisting optimizes grain structure and eliminates formation of microfractures, making the file even more durable. Other endodontic files are made by grinding flutes into the file.

Grinding weakens the metal's structure at the molecular level and creates microfractures on the metal's surface – both of which can lead to file separation.

### ADVANCED SURFACE TREATMENT

The Twisted File's special surface conditioning treatment finishes the file surface while respecting the integrity of the underlying grain structure. This maintains the hardness of the file and sharpness of the cutting edges.

## STRENGTH AND FLEXIBILITY THAT CAN BE MEASURED

In a study of cyclic fatigue, the Twisted File performed 2-3 times better than other NiTi rotary files on the market.<sup>2</sup>

- In a torsional stress comparison, the Twisted File was shown to absorb by far the greatest amount of energy before fracture. In fact, it can withstand about 60% more torque than files made using a traditional manufacturing process.<sup>1</sup>
- The Twisted File is up to 70% more flexible than other rotary NiTi files.<sup>2</sup>

### CYCLIC FATIGUE COMPARISON<sup>2</sup>

## AS SIMPLE AS 1-2-3

Twisted Files come in packs of three. That's not an arbitrary number. They simply work more efficiently and last longer. The Twisted File:

- Significantly lowers the number of files used per endo case
- Improves clinical efficiency in completing endo cases
- Reduces chair time for patients
- Greatly lowers the level and cost of file inventory

**K3™ is a third-generation, triple-fluted, asymmetric endodontic file system. Designed to cut quickly, efficiently and safely, with unparalleled debris removal, the K3 addresses technical and procedural issues that no other ground-fluted instrument does.**

*K<sup>3</sup> = √ENDO™*

### ENGINEERED FOR EFFICIENCY

Positive rake angle provides the active cutting action of the K3 file.

Reduced radial land with wide blade support adds peripheral strength to resist torsional and rotary stresses.

The third radial land stabilizes and keeps the instrument centered in the canal and minimizes "over-engagement."

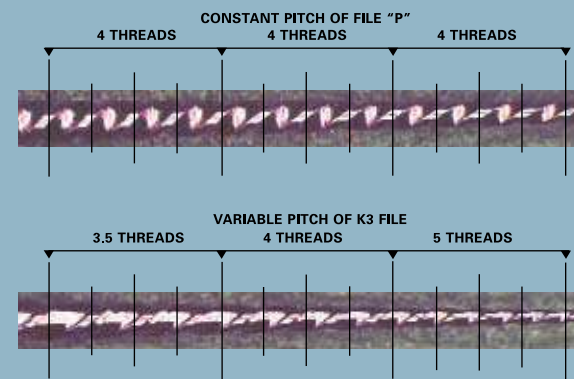

Radial land relief reduces friction on the canal wall.

RADIOGRAPH COURTESY OF DR. RICHARD MOUNCE

### VARIABLE PITCH

Many files maintain a constant pitch (distance between cutting edges) through the length of the file. This may cause a "screw-in" effect whereby each successive flute naturally follows the path created by the one before. **The K3 file has a varied pitch that allows debris to effectively channel coronally.** This is important not only during initial cleaning and shaping but also for retreatment.

**K3 files are more efficient than some other file systems at removing gutta percha in the apical third.** (Ref 2)

CONVENTIONAL FILE

QUANTEC

K3 FILE

### BLADE SUPPORT

Blade rollover or cracks can occur during instrumentation. SybronEndo has added structure behind the K3 and Quantec File edge. This is the most effective means of preventing the aforementioned problems.

### LESS FRICTION, MORE SUPPORT

With the recessed trailing edge of the radial land, K3 files minimize frictional resistance. Other nickel-titanium systems have wide radial lands that cause friction and can lead to breakage. K3 files have added mass behind the cutting surface to provide support and maintain integrity. With other systems, blade rollover or cracks can occur during instrumentation.

### AXXESS

Our Axxess line was designed for those difficult, hard-to-reach cases. Shorter file handles, when used in conjunction with our Axxess handpiece, result in an overall height reduction of approximately 5mm.

*The K3 system allows the practitioner to internally sculpt the root canal wall to a glassy smooth finish with safety, predictability and efficiency. Because of the wide selection of tapers and sizes available, if you're a beginner they're great, and if you're an expert, there is nothing you can't do with them!*

*– Gary Glassman, DDS, FRCD(C), Toronto, Canada*

### VARIABLE CORE DIAMETER

The relationship between the core diameter and the outer diameter varies from D1 to D16 in order to maintain flexibility along the entire working length.

### SAFE-ENDED TIP

Assists in following the canal shape while minimizing apical transportation.

### INCREASED HELICAL ANGLE

The increasing variable helical angle from tip to handle helps reduce the "pull-down" effect and assists in channeling debris coronally. This feature allows continuous instrumentation with little or no interruption from clogged flutes.

MASTERING ENDODONTIC INSTRUMENTATION

Dr. John T. McSpadden, a prolific inventor and researcher, introduced the first nickel-titanium endodontic files. He has now authored the most comprehensive evidence-based rotary instrumentation text available.

Mastering Endodontic Instrumentation      973-0130

K3 PROCEDURE PACK  
INSTRUMENTATION GUIDE

CASES WILL VARY ACCORDING TO INDIVIDUAL TOOTH ANATOMY.

1. Obtain straight-line access using the LA Axxess kit.
2. Locate the canal orifices and obtain coronal patency using hand files.
3. Begin crown-down by taking a .10 taper K3 Shaper to resistance.
4. Take a .08 taper K3 Shaper to resistance.
5. Estimate apical size.
6. Begin crown-down using a size #40 K3 File.
7. Establish working length with your Elements Diagnostic unit.  
A radiograph may be taken to assist in determining working length.
8. Complete crown-down preparation with a #35 K3 File, #30 K3 File, and #25 K3 File by taking each instrument to resistance at 300 to 350 rpm in an electric torque-control motor, using each instrument for no longer than 5 to 7 seconds.

CLINICAL TIPS

- Establish a glide path with hand files. Confirm patency between all rotary files.
- Irrigate often, alternating between sodium hypochlorite & SmearClear™ (17% EDTA solution along with centrimide and additional proprietary surfactants).
- Use very light pressure. Never force instruments. When the instrument no longer advances apically, proceed to the next file.

The Procedure Pack will work in many cases, but all canals are different and additional sizes of K3 Files may be required. Begin with a K3 File three sizes larger than your estimated apical diameter.

K3 WORKSTATION

The K3 Workstation provides three rows for files, a holder for gutta purcha points, a ruler for measuring files, a holder for disposable foam, and a Tip Snip gutta purcha cutter. Using a measurement dial, the Tip Snip flush cuts gutta purcha to the apex size you need. An extra row of holes in the back forms a staircase that gives a rapid and perfect file measurement.

*The efficiency I achieve through the use of Quantec SC files is invaluable, allowing me more time to focus on my patient's needs and concerns and less time on the mechanical aspects of cleaning and shaping the case.*

— Dr. Matt Brock

The LA Axxess™ burs, designed in cooperation with Dr. L. Stephen Buchanan, idealize the functional aspects of access preparations by cutting a perfect line-angle extension without any ledges or irregularities. These burs quickly, safely and accurately cut ideal filepaths through coronal tooth structure, dramatically reducing the chances of file separation.

LA Axxess 2.0 Kit    815-1404  
Kit contains two of select burs.

LA Axxess Kit    815-1400  
Kit contains two of each bur.

Parabolic tip prevents ledging or dinging.

**LA AXXESS™ DIAMOND BUR**

Designed by Dr. L. Stephen Buchanan, the LA Axxess high-speed diamond bur allows effortless cutting of dentin and enamel and automatically, without any direct visual control, creates perfect line-angle extensions as it meets each orifice. With its rapid high-speed cutting ability and its automated outline form, molar access times can be greatly reduced and outline forms have a more organic shape, which idealizes line-angle extension as well as conservation of tooth structure.

LA Axxess Diamond Bur (pkg of 6)    815-1415

**ENDORING**

A convenient way to hold endodontic instruments and canal lubricant during a procedure, the EndoRing features an easy-to-read ruler with rubber stop port, allowing quick measurements of files up to 30mm (at 1 and .5mm increments) for both right- and left-handed clinicians. The EndoRing and the foam inserts are autoclavable.

<b>EndoRing Kit</b>	<b>825-0049</b>
<b>Contains:</b>	
1 – EndoRing Measuring Device (with 3 sizes of rings)	
1 – Nondisposable Gel Well	
4 – Disposable Gel Wells	
3 – Foam Inserts	
<b>Foam Inserts (48 pieces – 24 blue/24 yellow)</b>	<b>825-0050</b>
<b>Disposable Gel Wells (24 pieces)</b>	<b>825-0051</b>

**ENDO-BENDER®**

Designed by Dr. L. Stephen Buchanan, SybronEndo's Endo-Bender allows the clinician to accurately bend endodontic products to conform to all canal curvatures. Stainless steel files, posts, pluggers, and spreaders can now be curved and bent with precision and accuracy. The Endo-Bender accomplishes what hemostats, pliers, cotton rolls or fingers never could. Fabricated from surgical stainless steel, the Endo-Bender is built to last, yet will safely bend instruments without kinking or destroying them. The instrument has a numbered gauge for consistency and is autoclavable.

<b>Endo-Bender</b>	<b>976-0100</b>
<b>Endo-Bender Gauge</b>	<b>976-0101</b>

**SlickGel™ ES**

**SLICKGEL™ ES**

SlickGel™ ES is specially formulated to aid in the negotiation of root canals by endodontic instruments. Each MicroDose® polytube contains EDTA that chelates calcifications in the root canal system. Sodium hypochlorite irrigants react with SlickGel ES's urea peroxide to produce vigorous bubbling action that helps flush debris from the root canal system.

SlickGel ES is composed of a water-soluble base containing urea peroxide and an aqueous solution of EDTA, which aids in chemically removing the smear layer. SlickGel ES primarily provides a lubricating medium that helps with the negotiation of a file into an endodontically treated tooth. This step is important in that it helps prevent blockage during the cleaning and shaping process. Combined with SmearClear,™ used at the end of the procedure, the smear layer can be effectively removed.

SlickGel ES is packaged in single-use 1ml MicroDose polytubes that cut open easily. Twelve SlickGel polytubes are conveniently sealed in a resealable polybag for easy storage and dispensing.

**SlickGel ES pack**    **973-1015**  
**12 MicroDose polytubes (1ml ea)**

**ENDOTOUCH™ TC**

The EndoTouch TC by NSK is our first endodontic motor without a cord or foot pedal. Small, light, and powerful, the EndoTouch TC delivers five torque settings and nine preset speeds, giving the clinician total control during instrumentation. Combined with the durable K3 rotary nickel-titanium files, it is the most advanced system available. Includes pushbutton handpiece.

**FEATURES**

- No cord or foot pedal
- Small, lightweight and comfortable
- Five torque settings
- Nine speed options available from 125 to 625 rpm
- Auto-reverse
- Quick-charge battery

Endotouch TC 220v	815-9123

16:1 Contra-Angle Replacement Handpiece 815-9125

16:1 Contra-Angle Replacement Handpiece 815-9124

**M4 SAFETY® HANDPIECE**

SybronEndo's M4 Safety Handpiece has several features designed to aid the endodontic practitioner in efficiently and effectively performing root canal therapy. The watch-winding, oscillating movement of the M4 Safety Handpiece keeps the instrument "floating" in the canal. The operator controls coronal and apical pressure, while the M4 smoothly and efficiently "glides" the endo instrument through the canal. That's the "Safety" in the M4 Handpiece.

M4 Safety Handpiece E-Type	25846
----------------------------	-------

*The M4 handpiece is an invaluable aid in creating a smooth glide path to the foramen. I use it with hand files #6 (when needed), #8, #10 and #15 on just about every molar tooth that I treat. With reciprocation, file breakage is not a concern. This handpiece is will deliver predictable and reproducible results.*

— Dr. Fred Barnett

**TCM ENDO III**

The microprocessor-controlled Nouvag TCM Endo III is a slow-speed, electric torque-control motor capable of achieving fast and easy root canal preparation. Speed and maximum torque levels are preselectable and constantly controlled by the TCM Endo III control unit. Speed is constant until the adjusted torque limit is reached, then the motor will reverse for two revolutions and return to the forward direction to finish root canal preparation. The TCM Endo III is compatible with the K3 Rotary System. Handpiece sold separately.

TCM Endo III, 110v	815-9113

AXXESS HANDPIECES

SybronEndo handpieces have long been clinician favorites, are compatible with all manufacturers' e-type couplings and are ideal for K3, Quantec and other rotary files.

The Axxess handpiece provides 5mm of additional clearance (when used with Axxess files such as K3) to ease work in tight posterior regions and will also accept standard rotary files. The 18:1 handpiece is perfect for rotary NiTi use and is available with a variety of heads.

- 18:1 Axxess Spring-Head Handpiece 815-9016
- 18:1 Axxess Latch-Head Handpiece 815-9010
- 18:1 Axxess Push-Button-Head Handpiece 815-9008
- 18:1 Replacement Axxess Spring Head 815-9081

1:1 HANDPIECE

SybronEndo's Mini-Spring Head 1:1 Handpiece is ideal for use with the MicroSeal system.

- 1:1 Mini-Spring Head 815-9088
- Replacement Axxess Spring Head 815-9081

TORQUE LIMITING HANDPIECE

The new Niti Control handpiece is designed for use with E-type air driven motors. With a gear reduction of 64:1 the mini head Niti Control handpiece also offers multiple torque limits for rotary instrumentation. The Niti Control handpiece can be used with most latch type rotary files on most standard air driven motors.

- 64:1 Niti Control Handpiece 815-9131

Not available in all countries.

**TRIPLE-FLEX® FILES**  
Triple-Flex Files are triangular-bladed, stainless steel instruments designed for flexibility with integrity. The twisted flutes allow aggressive cutting and debris removal you demand without sacrificing the instrument's inherent stability. Unlike round blades that have flutes ground in, Triple-Flex Files are highly breakage-resistant, even in the most stressful situations. For performance and value you can depend on, Triple-Flex Files are the preferred choice.

**K-FILES**  
K-Files are produced to give the operator a smooth tactile sense inside the canal during instrumentation.

**K-FLEX® FILES**  
K-Flex Files (shown above) feature a unique rhomboid design, which provides a short axis for flexibility while maintaining cross-sectional strength. K-Flex is more flexible than conventional files of comparable size, particularly in sizes #30 and above, which facilitates the negotiation of curved canals and their preparation with minimal potential for ledging and perforating.

More efficient files and shaping techniques call for a more effective irrigant. SmearClear enhanced EDTA <6% enhanced Sodium Hypochlorite is made for the new generation of filing techniques.

5.25% NaOCl

17% EDTA

SmearClear

Photos (200x) show decimal tubules after instrumentation, a NaOCl soak and further one-minute soak in the respective irrigant. Photos and study courtesy of Drs. J. Jantararat, K. Yanpiset and C. Harnirattisai.

**SMEARCLEAR™**

Successful endodontic therapy demands a clean and clear root canal system. SmearClear's enhanced EDTA formulation addresses this issue by consistently removing the smear layer and leaving the dentinal tubules clear of organic matter. The practitioner will recognize an increase in the efficacy of adhesives as well as an assist in the 3-dimensional obturation of the root canal system.

SmearClear Kit	973-1001
SmearClear Liquid Refill	973-1002
Syringe (3) and Side-Vented Needle (30) Refill	973-1003

**SLICKGEL™ ES**

SlickGel™ ES is specially formulated water-based suspension to aid in the negotiation of root canals by endodontic instruments. Each MicroDose® polytube contains EDTA that chelates calcifications in the root canal system. Sodium hypochlorite irrigants react with SlickGel ES's urea peroxide to produce vigorous bubbling action that helps flush debris from the root canal system.

SlickGel ES pack	973-1015

RealSeal 1 Bonded Obturator<sup>™</sup> is the next generation in carrier-based delivery systems. All the components of RealSeal 1 – sealer, filler and core – are resin-based materials and bond with each other to form a superior seal. Creating a true chemical bond when materials contact, this proven technology provides superior leakage prevention.<sup>1</sup> As an added benefit, this system's core is engineered to be easily discernable on a radiograph from the Resilon filling material that coats it.

Methacrylate monomers in the Sealer and the Resilon material of the Obturator bond chemically with each other.

When the Obturator is placed into the canal with the heated Resilon on its surface, the resin monomer molecules in the unset Sealer diffuse into the Resilon material. They cross-link with the molecular components of the Resilon formula and co-polymerize with them to form a homogeneous resin matrix.<sup>2</sup> A seamless interface forms along the length of the Obturator, eliminating gaps and potential pathways for leakage and reinfection.

An obturation system has one primary function – sealing the root canal. RealSeal 1 creates a superior seal, preventing leakage and re-infection. In an independent blind

study conducted at the University of Rome, the RealSeal 1 Obturation System resisted leakage 6 times better than the Soft-Core<sup>®</sup> System and nearly 10 times better than the Thermafil<sup>®</sup> System.

Fluid filtration leakage study:  
Leakage resistance

1. "A Fluid Filtration Comparison of Gutta-Percha Versus Resilon: A New Soft Resin Obturation System." Stratton et al., U.S. Army Dental Activity, Fort Bragg, NC. Abstract: #OR20, JOE, Vol. 31(3), March 2005.  
2. Reference [www.resilonresearch.com](http://www.resilonresearch.com).

## Quality that's apparent

The RealSeal 1 Obturators and Verifiers are injection molded for extreme accuracy and precision. Each RealSeal 1 Obturator is centered inside the Resilon filling material, ensuring that all of the canal walls are coated as evenly as possible. Compare this to the inconsistent coverage of hand dipped obturators from the current market leader in carrier-based systems.

Injection molding ensures a consistent amount of Resilon as the RealSeal 1 core (bottom) is centered in the middle of the filling material.

A hand-dipped obturator (right) often results in uneven distribution of the filling material.

## Superior radiopacity

The RealSeal 1 filling material has a higher radiopacity than gutta-percha. RealSeal 1 also offers dual radiopacity — the core and filling material have different levels of radiopacity. As a result of this "dual" radiopacity, you are able to see the core's location relative to the filling material inside the root canal. The dual radiopacity makes it easy to see when the core is placed too long or too short within the canal. The competitive carrier-based systems with monochromatic radiopacity do not have this feature.

Radiograph showing positioning of RealSeal 1's core material.

Radiograph of RealSeal 1 Obturator.

Ease of application

Prepare the canal with a .08 coronal flare and select the appropriate size obturator via size verifiers.

Heat Obturator in the RealSeal 1 Oven and coat the canal walls with self-etch sealer.

Seat RealSeal 1 Obturator in the canal within 10 seconds. For short canals, you can also trim off 2mm of the Resilon material.

Easily retrieved

RealSeal 1 Obturators are easily retrieved via mechanical means or chloroform can be used to dissolve the entire obturator. In Case A below, the obturator was removed using a small amount of chloroform and hand files and the canal re-instrumented in a little over 3 minutes. In Case B below, the obturator was removed with chloroform only and re-instrumented in slightly more than 7 minutes.

Latex free

The filling material used with RealSeal 1 is made from polymers of polyester and not gutta percha. This resin-based material (Resilon) does not contain rubber or rubber-based materials. Consequently, RealSeal 1 is ideal to use with patients who have latex allergies.

Choice of Speeds

Micro-Motor Eliminates Hand Fatigue

Pencil Grip Enhances Tactile Feedback for Greater Control

Easy-to-Read Polarized Tilting Screen Eliminates Glare and Provides Placement Flexibility

Handpiece Button Provides One-Touch Control for Instant Heating and Cooling with Automatic Timeout for Safety

One-Touch Controls for Efficiency and Accuracy

Small Footprint Takes Up Only 1/3 the Space of Two Separate Machines

Medical-Grade Connections Ensure Longevity and Accuracy

**ELEMENTS OBTURATION UNIT™**

The Elements Obturation Unit combines our **System B™** technology with a motor-driven extruder handpiece to make obturation **efficient, predictable, and accurate. From downpack to backfill, the Elements Obturation Unit puts the Continuous Wave of Condensation Technique into one simple-to-operate device that takes up only 1/3 the space of two separate machines.**

**SYSTEM B PLUGGER MAXIMIZES CONDENSATION FORCE FOR COMPLETE FILL**

Matched Autofit pluggers replicate the canal shape and maximize condensation forces to move fill material and sealer into all areas of the root canal, including lateral canals, which ensures a complete fill.

.04 Plugger  
952-0031

Hot Pulp  
Test Tip  
973-0219

**.04 TAPER WITH SMALLER TIP IMPROVES FILLING**

The .04 taper plugger is 40% smaller which allows access into even the smallest canals. The .04 plugger fits both the original System B and the Elements Obturation Unit.

**FEATURES AND BENEFITS**

**System B**

- One-touch controls for downpack, backfill and hot pulp testing
- Each function has preset temperature and duration
- Tip temperature is continuously maintained and displayed
- Time-out feature prevents overheating
- Automatic shut-off precludes using wrong or worn-out tip
- Plugger heats instantly for immediate use

**Extruder**

- Motorized handpiece eliminates hand fatigue and precludes voids
- Pencil-grip handpiece enhances control and fits standard handpiece holders
- Precise temperature control for consistency
- Extra-long prebent needles offer convenience and unprecedented visibility
- Heats quickly and shuts off automatically
- Handpiece shows remaining material

**Handpieces**

- Plugger and extruder handpieces are lightweight, strong and durable
- Insulation technology keeps handpieces cool for you and the patient
- Aluminum shields minimize downtime – use one while autoclaving the other

RealSeal brings endodontics into the age of adhesive dentistry. Re-infection can be minimized when we prevent bacterial recolonization and entomb remaining micro-organisms by creating a complete seal of the entire length of the root canal system. RealSeal has the potential to seal the entire root canal space from orifice to apex, something not accomplished by gutta percha.

– Joseph D. Maggio, DDS,  
Chicago, Illinois

REALSEAL™

RealSeal is an endodontic filling material with the familiar handling of gutta percha and the added vital benefits of a superior seal. Because RealSeal is applied in the same way as gutta percha, adapting it to your current system is as seamless as the seal it creates. Use the obturation technique of your choice, adding only a priming step before filling.

Why do we call it RealSeal? Because it is the endodontic filling material that provides a REAL seal. And Resilon™\*, the primary component of RealSeal, has also been proven to be biocompatible, nontoxic and nonmutagenic.<sup>1</sup>

RealSeal is:

- **Leak-Resistant.** Unlike gutta percha, RealSeal leaves no gap for leakage. Coronal and apical leakage is substantially reduced.
- **Strengthening.** Gives the root significant toughness.
- **Technique-Compatible.** Works with your current filling method.
- **Retreatable.** With chloroform and/or heat. Like Grossman's formula, retreatments are easy.
- **Radiopaque.** Just like your current method of obturation, detection is not a problem.

\* Resilon is a trademark of Resilon Research, LLC.

<sup>1</sup> Loma Linda University Biocompatibility and Toxicology Research Laboratory, Evaluation of Cytotoxicity of Resilon and its Extracts Using the Agar Diffusion Method. Conclusion: Resilon is non cytotoxic using the agar diffusion method.

A SUPERIOR SEAL DRAMATICALLY REDUCES LEAKAGE

Traditional gutta percha shows fissures and gaps between its surface and the dentin – just the place for harmful bacteria to multiply.

RealSeal (Resilon™) fills seamlessly and smoothly, eliminating leakage.

Proven leak-resistance. Source: G. Shipper, D. Orstavik, F.B. Teixeira, and M. Trope. Journal of Endodontics (in press).

HOW REALSEAL WORKS

Based on polymers of polyester, RealSeal contains bioactive glass, Ca(OH)<sub>2</sub>, and radiopaque filler, giving you a seamless seal.

RealSeal resin tags. No other sealer can offer this kind of bonding.

NO LEARNING CURVE

The RealSeal endodontic obturation system now offers an additional choice of resin-based sealers – RealSeal SE™ Self-Etch Sealer. This new self-etch sealer eliminates the priming step without hindering the sealer's performance.

RealSeal SE provides all the benefits of the original RealSeal resin sealer and gives just as superior a seal. And when switching from gutta percha to the RealSeal SE system, there's absolutely no change in technique needed.

RealSeal is the real deal! It strengthens the root, seals the canal system and is simple to use. The protocol allows me to incorporate my current obturation technique. The core and sealer “marry” together with the canal walls to provide a true chemical bond.

– Gary Glassman DDS, FRCD(C)  
Toronto, ON, Canada

GUTTA PERCHA

SybronEndo’s radiopaque gutta percha is the time-proven fill for your root canal therapies.

AUTOFIT® GREATER TAPER GUTTA PERCHA

Developed by Dr. L. Stephen Buchanan, Autofit gutta percha is the latest innovation in filling materials. Greater Taper cones are designed to match canals shaped with Greater Taper files. Autofit cones have a parallel shank that is tapered to a point (similar to the end of a pencil).

Limited European distribution.

AUTOFIT BACKFILL GUTTA PERCHA

Autofit Backfill gutta percha cone sizes directly correspond with the sizes of the Buchanan Heat Pluggers. Once the initial down-pack is complete, backfill cones perfectly fill the plugger void. Tip diameter for the pluggers and backfill cones is .5mm, so there is no need to “snip” them. Backfill cones have a nonstandard, continuous taper and are shorter than typical gutta percha.

BUCHANAN HEAT PLUGGERS

Available individually or in a prepackaged kit of five, the Buchanan Heat Pluggers have revolutionized warm gutta percha techniques. These high-quality pluggers have a shape that closely matches the final root canal preparation. This maximizes condensation forces on the softened gutta percha without placing undue stress on the root canal system. Because the Elements Obturation Unit and the System B Heat Source provide an exact temperature throughout the procedure, the Buchanan Pluggers do not over-soften the gutta percha, and the warm mass fills lateral canals as easy as it seals apically. When you disengage the heat, the pluggers cool almost instantly and separate easily from the condensed gutta percha.

BUCHANAN HAND PLUGGERS

Featuring both a tapered nickel-titanium end and a stainless steel end, Buchanan Hand Pluggers can be used in any common obturation technique, including warm and cold condensation. The pluggers are also ideal for backfilling canals. Use the color-coded NiTi end for finishing off condensation procedures in even the most radically curved canals. Either end condenses and controls the movement of gutta percha under pressure. In addition, the Buchanan Hand Pluggers are fabricated of the highest grade materials for excellent durability and sterilization.

SYSTEM B™ HEAT SOURCE

SybronEndo is the industry leader in endodontic heat carriers. The System B Heat Source provides clinicians with unequalled convenience, reliability, and accuracy. It allows you to dial in the exact temperature setting, which it maintains throughout the procedure. Simply set the temperature, and within 12 seconds, you have a superior apical seal and post space in a single motion. Backfill is just as easy. A sturdy cast-aluminum enclosure with carrying handle makes it easy to carry and place the System B wherever you want. The handpiece and cord assembly may be disconnected and autoclaved. With SybronEndo's rechargeable battery and charge adapter, you will get at least one hour of continuous operation. The System B also accepts SybronEndo's Touch 'n Heat tips.

\*Also used with Touch n' Heat.

*The System B Heat Source drives the Continuous Wave Pluggers through root canal systems in less than four seconds, optimizing the hydraulic movement of sealer and gutta percha. This Centered Condensation Technique combines the apical accuracy of cone-fit techniques with the optimized 3D capabilities of warm gutta percha obturation, fewer instruments and without the challenge of creating post spaces.*

— L. Stephen Buchanan, DDS, FICD, FACD

AUXILIARY GUTTA PERCHA

Auxiliary Gutta Percha Points are readily softened by heat and flexible enough to be easily inserted into the canal.

TOUCH 'n HEAT™ 5004

Designed by Dr. Herb Schilder, the Touch 'n Heat conveniently and consistently puts the heat on for warm gutta percha techniques. The patented autoclavable tips are internally heated so that the heat is concentrated at the end where it's needed most. Not only do you have a precisely heated tip to work with, you also can control it's temperature. Say "goodbye" to old Bunsen burners and step up to the Touch 'n Heat today.

XPRESS SEALERS

Two of SybronEndo's classic sealers now boast a new delivery method to help simplify setup, delivery and cleanup. Tubli-Seal and Tubli-Seal EWT are now available in automix syringes. These syringes offer easy mixing at your fingertips in a perfect 1:1 ratio without worry and without manual mixing. This innovative delivery adds efficiency, convenience and simplicity to a line of sealers that is already steadfast and dependable.

## Sleek. Compact. Powerful.

The MiniEndo II is a sleek, compact ultrasonic unit designed specifically for endodontic applications and to deliver just the right amount of power and amplitude at the tip to successfully complete endodontic procedures.

### MINIENDO II ULTRASONIC UNIT

MiniEndo II Ultrasonic Unit Type S, 110v 973-0236

### ACCESSORIES

Wrench for Ultrasonic Tips 973-0096  
MiniEndo Handpiece (M3x.6) Type S 973-0201

MB2 canal located by the planning motion of the Red Star RS-2 tip.

*From vibrating posts to removing separated instruments and everything in between, RedStar Tips provide powerful yet safe tactile control of ultrasonic energy.*

— Richard Mounce, DDS,  
Vancouver, Washington

### REDSTAR TIPS

RedStar Tips are innovative in ultrasonics. These tips provide a wide range of functionality and efficiency and are intended for use by both the novice clinician and the expert specialist. Developed in collaboration with Dr. Richard Mounce, these tips are designed with safety in mind first and will enable the clinician to handle various endodontic cases.

#### RedStar-1 Spreader Tip

- Helps remove cement around posts
- Opens calcified canals
- Removes isthmus tissue between canals

REDSTAR-1 SPREADER TIP 973-1040

#### RedStar-2 Planing Tip

- Removes pulp stones smoothly and safely from pulp chamber without scoring
- Smooths the axial walls and floor of the pulp chamber
- Shaves thin layers of dentin without cutting too deep

REDSTAR-2 PLANING TIP 973-1041

ULTRASONIC TIP INTRODUCTORY KIT

SybronEndo's Starter Tip Kit is the perfect entry for those starting to recognize the benefits ultrasonics can provide for their office. Each kit contains one: SP-2, Scaler, CT-4 and Diamond-Coated CT-4.

Ultrasonic Tip Introductory Kit 973-1000

THE "4" SERIES™

The "4" series is geared for troughing around posts and opening calcified canals. SybronEndo recommends that the clinician begin at level one and increase according to his personal comfort level.

UT-4	973-0039
SJ-4	973-0041
CT-4	973-0057

SPREADER TIPS

Longer than our "4" series, Spreader Tips are designed for troughing within the canal. Spreader Tips can trough around posts or break open a calcification, but also can be used to help retrieve separated files that are stuck in the apical third of the canal.

SP-1 Small Spreader Tip	973-0063
SP-2 Medium Spreader Tip	973-0065
SP-3 Ultra-Fine Spreader Tip	973-0067

BUC-3	973-0404
BUC-3A	973-0407
BUC (set of 6 tips)	973-0405

Limited European distribution.

BUC-1 AND BUC-1A

The BUC-1 can be used for gross dentin removal, moving access line angles, cutting a groove in the mesial access wall to drop into MB2 canals, and for quickly and carefully unroofing pulp chambers. Its radiused tip geometry also allows effortless entry into each canal orifice and facilitates the creation of a smoothly troughed surface, which is helpful in finding reclusive MB2s. Use at power level 1-3.

horizontally smooth the pulp chamber floor without cutting past it to get to the darker colored dentin. The smaller version BUC-2A has a 1.0mm diameter and can be used for corners of molar access prep and bicuspid access prep.

BUC-2 AND BUC-2A

The BUC-2, with its disk-like radiused tip, can be used to smoothly and safely plane attached pulp stones from the pulp chamber floor without scoring it. In molars, it can be used to

BUC-3 AND BUC-3A

The BUC-3 is an extremely active instrument with a sharp tip. It is used for chasing canals halfway up a root or for digging around a post or carrier-based obturator to remove it. It has a water port placed near the cutting surface of the tip for increased washing and cooling of the operative site.

SPECIALTY TIPS

ST 973-0074

Scaler tip used to break away cement or calculus. The ST-1 is similar to the CT-4 except for its curvature for better access in difficult-to-reach areas within the tooth structure.

VT 973-0069

The vibrator tip is designed to vibrate a post out, vibrate a crown or bridge off or help seat a crown.

CK (Carr-Kanter Back-Action Ultrasonic Tip) 973-0061

Used to reach tough areas such as MB2 canals.

SURGICAL ULTRASONIC TIPS

CT TIPS™

Our surgical tips, designed by Gary Carr, include CT, UT and SJ sets. Surgery is initiated with the “1” tip and followed by the “2” or “3,” depending on tooth position.

Strength:	High
Tips:	Somewhat bulky, used in wide preps
Visibility:	Moderate
Water port:	Yes

CT-1 Initiating Tip 973-0059  
Straight-line tip with 90° angle used to initiate the preparation.

CT-2 Main Right Tip 973-0053  
Angled tip for use on upper right and lower left to complete the prep.

CT-3 Main Left Tip 973-0055  
Angled tip for use on upper left and lower right to complete prep.

UT TIPS

Strength:	Moderate
Tips:	Moderate size, can access most areas
Visibility:	Good
Water port:	Yes

UT-1 Initiating Tip 973-0033  
Straight-line tip with 90° angle used to initiate the preparation.

UT-2 Universal Right tip 973-0035  
Angled tip for use on upper right and lower left to complete the prep.

UT-3 Universal Left tip 973-0037  
Angled tip for use on upper left and lower right to complete the prep.

SJ TIPS™

Strength:	Delicate
Tips:	Very fine, used for fine preps
Visibility:	Excellent
Water port:	Yes

SJ-1 Initiating Tip 973-0084  
Straight-line tip with 90° angle used to initiate the preparation.

SJ-2 Slim Jim Right Tip 973-0078  
Angled tip for use on upper right and lower left to complete the prep.

SJ-3 Slim Jim Left Tip 973-0080  
Angled tip for use on upper left and lower right to complete the prep.

BK-3 TIPS

Our BK-3 surgical tips have three bends for easy access to any preparation, including MB2 canals. BK-3s provide excellent visibility and can finish an entire prep with one tip. Water is directed down the three bends and is able to reach the surgical site. BK-3s are for use with any application.

BK-3 Right (upper right, lower left) 973-0110  
BK-3 Left (upper left, lower right) 973-0112

FILE ADAPTOR

The File Adaptor, used with NiTi blanks or K-Files (sizes 15-35) without a handle, can be inserted into the chuck. It activates irrigant in the canal, thereby increasing the effect of irrigation by acoustic streaming.

File Adapter 973-0031

DIAMOND-COATED ULTRASONIC TIPS

Our most popular Ultrasonic Tips are now also available with a diamond coating, improving their cutting efficiency and durability.

CT-4 Straight-Line Tip (our most popular) 973-1057  
CT-1 Initiating Tip 973-1059  
CT-2 Right Tip 973-1053  
CT-3 Left Tip 973-1054  
UT-4 Straight-Line Tip 973-1039  
CK Carr-Kanter Back-Action Tip 973-1060  
SP-2 Medium Spreader Tip 973-1065  
BK3-R Upper Right/Lower Left Tip 973-1110  
BK3-L Upper Left/Lower Right Tip 973-1111

KiS TIPS

The KiS microsurgical ultrasonic instruments are designed for use in endodontic microsurgery and offer dramatically increased cutting efficiency due to their diamond coating. The dentin surface is left smooth, yet microscopically rough, which results in better adaptation of filling materials, fewer microfractures and less leakage. The longer shafts and increased angles give the clinician improved access and the strategically placed irrigation port affords more precise control of irrigation.

KiS-1D 973-1021  
Angled 80° at the working end, this instrument is a general purpose tip for use on anterior and posterior areas – 0.5 mm diameter x 3.0 mm cutting surface.

KiS-2D 973-1022  
Similar to the KiS-1D, this instrument is for larger diameter roots – 0.7 mm diameter x 3.0 mm cutting surface.

KiS-3D 973-1023  
This double-angled 75° instrument is for use on the buccal root of the mandibular right molar and mesial buccal of the maxillary left molar – 0.5 mm diameter x 3.0 mm cutting surface.

KiS-4D 973-1024  
This double-angled 110° instrument is for use on the lingual root of the mandibular left molar and distal buccal of the maxillary right molar – 0.5 mm diameter x 3.0 mm cutting surface.

KiS-5D 973-1025  
A mirror image of the KiS-3D, this instrument is for use on the buccal roots of the mandibular left molar and mesial buccal of the maxillary right molar – 0.5 mm diameter x 3.0 mm cutting surface.

KiS-6D 973-1026  
A mirror image of the KiS-4D, this instrument is for use on lingual roots of the mandibular right molar and distal buccal of the maxillary left molar – 0.5 mm diameter x 3.0 mm cutting surface.

KiS set of 6 973-1020  
The set includes KiS-1D, KiS-2D, KiS-3D, KiS-4D, KiS-5D and KiS-6D.

Limited European distribution.

Take it from the experts – SybronEndo’s microsurgical line has been developed by endodontists for the unique needs of endodontic surgery. See how their expertise can better facilitate your surgical procedures.

THE STROPKO IRRIGATOR HAS MULTI-DISCIPLINARY USES

ENDODONTICS

- Rinse and dry precisely for unsurpassed vision during every procedure
- Clear away dentinal dust while retrieving broken instruments
- Control vision of site while troughing to locate hidden canals in all molars
- Clean and dry root-end preparations when performing microsurgical procedures
- Rinse and dry area after staining root-end preparation for improved seal
- Air-dry the canal system with a light touch of air prior to obturation for improved seal

RESTORATIVE

- Direct a precise and controlled flow of air or water into any area
- Be confident of surface management in micro-adhesive dentistry
- Clean and dry sulcus during tissue retraction prior to impressions
- Use gentle air flow to “thin” resin for total light cure during placement in deep areas
- Rinse completely and have positive drying of area in all bonding procedures

SURGERY

- Gently flush any area for vision and avoid splashing or inadvertent contamination

STROPKO IRRIGATOR

The Stropko Irrigator places the perfect amount of air and water pressure into the field. Its small, luer-lock tips do not impede visibility during irrigation or drying and are excellent for use under the microscope. Fits most Triplex air/water syringes.

<b>Stropko Irrigator</b>	<b>975-0039</b>
<b>Stropko Blue Irrigation Tips</b>	<b>975-0120</b>

ADAPTER

Most units accommodate the Stropko without the use of an adapter. For old Adec units or Triplex syringes, an adapter may be needed to accommodate the Stropko. The adapter will modify a female-type syringe head into a male screw-type syringe. The thread measurements on the adapter are 5/16 – 32.

STROPKO IRRIGATOR

CURETTES

SybronEndo curettes are extremely sharp and able to cut through attaching fibers with the efficiency of a scalpel. This allows the skilled clinician to provide patients with the shortest recovery time possible. All curettes are autoclavable and manufactured from only the highest-grade surgical stainless steel.

Ruddle Curettes are used to make a sharp dissection of the periosteal tissue, thus preventing tissue damage. They allow for undermining elevation of the flap, which along with the micro-surgical incision are the first two steps in automatic flap management.

<b>Ruddle Upper Left/Lower Right Curette</b> Round ends used to cut and elevate gingival tissue.	974-0033
<b>Ruddle Upper Right/Lower Left Curette</b> Round ends used to cut and elevate gingival tissue.	974-0034
<b>Mini Ruddle Upper Left/Lower Right Curette</b> Small squared ends used to cut and elevate gingival tissue.	974-0035
<b>Mini Ruddle Upper Right/Lower Left Curette</b> Small squared ends used to cut and elevate gingival tissue.	974-0036

The Molt 2-4 is used for elevation of the tissue once the incision is made.

<b>Molt 2-4 Elevating Curette</b> Rounded ends with no angle are used to cut and elevate tissue.	974-0037
---	----------

Jaquettes are double-ended and used to curette pathological lesions from the surface of the root. They are especially useful when the bony access is small or when tissue needs to be curetted from lingual recesses.

<b>Jacquette Curette</b> Sharp Curette used to spoon out lesion.	974-0038
<b>Mini Jacquette Curette</b> Sharp Curette used to spoon out lesion.	974-0039

RETRACTORS

SybronEndo Retractors are designed specifically for apical surgery. Our retractors reduce slippage and minimize tissue impingement. With oversized handles, abraded surfaces, and thumb-support detentes, SybronEndo retractors are both ergonomic and clinically superior. The Carr Retractors have a serrated edge that can easily rest in a groove created by the doctor. This takes pressure off of an assistant who holds back the flap and reduces the occurrence of slippage on the bone.

<b>Carr #1 45° Retractor</b> Serrated edge for posterior applications	974-0030
<b>Carr #2 90° Retractor</b> Serrated edge for anterior applications	974-0031

MIRRORS

It is essential in microsurgery to see not only through the microscope but also into small spaces like the bony crypt. Conventional dental mirrors cannot access the areas created in microsurgery. SybronEndo's stainless steel mirrors are durable and autoclavable. The semi-flexible heads and small surface areas allow greatly improved access to the surgical site. Multiple shapes and sizes are available for various access holes. Mirrors, scalpels and handles are interchangeable and sold separately.

<b>CM-R Mirror Set</b> 1 each CM-1, CM-2, CM-3 with regular handles	979-0010
<b>CM-1 5mm Round</b> 1 mirror head only	979-0001
<b>CM-2 3mm Round</b> 1 mirror head only	979-0002
<b>CM-3 Medium Oval</b> 1 mirror head only	979-0004
<b>CM-6 Large Oval</b> 1 mirror head only	979-0008
<b>CM-H Long Scalpel/Mirror</b> 1 handle only	979-0009
<b>CK-H Scalpel/Mirror Handle</b> 1 handle only	975-0015

IMPACT AIR HANDPIECES

The Impact Air handpiece is an essential tool in every endodontic office. Its head was designed for the sterile conditions of implant surgery and does not exhaust air, reducing the risk of an air embolism and maintaining sterility in the surgical field. The Impact Air is ideal for bony access, as well as root resectioning. Its 45° angled head allows maximum visibility and is ideal for accessing tight spaces during endodontic surgery.

The high-speed Impact Air Handpiece accepts “friction-grip” burs with effortless bur insertion and removal. It is available in a four-hole version without fiber optics, and a five-hole version with fiber optics.

Impact Air Five-Hole w/Fiber Optic*	977-0002
Impact Air Four-Hole	977-0001

\*For sale only in the USA.

EXPLORERS

SybronEndo has developed our Explorers with the clinicians unique endodontic needs in mind.

The extremely sharp and durable Carr Explorer is used to create an initial tracking groove by hand.

The Endo Explorer is the classic explorer used to locate canals.

CX-1 Carr Explorer	974-0040
DG-16 Endo Explorer	974-0041

PLUGGERS AND CONDENSERS

SybronEndo carries several condensers designed to assist the clinician to insert retro-fill material into a retro-prep. The unique angles offered on the condensers fit most any preparation. All condensers are autoclavable and manufactured from only the highest-grade surgical stainless steel.

P-1 Double-Ended Plugger (90° Angle) For small anterior preparations.	974-0005
P-1L Large Double-Ended Plugger (90° Angle) For small anterior applications.	974-0006

B-2R Buchanan Condenser (Right Angle) Angled for upper left or lower right with ball burnisher on opposite side.	974-0001
B-2L Buchanan Condenser (Left Angle) Angled for upper right or lower left with ball burnisher on opposite side.	974-0002
B-3 Buchanan Condenser (90° Angle) Angled for anteriors with ball burnisher on opposite side.	974-0003

SUTURES

Originally designated for cardiac surgery due to their strength and low friction while moving through tissue. These sutures are ideal for endodontics with their minimal tissue trauma. The Tevdek sutures, which are 1/3 stronger than silk, are coated and impregnated with Teflon®. The non-stick surface means less bacteria adhesion, which accelerates the healing process and allows for early suture removal. Great handling qualities allow for knots that are easily tied and very secure. Our KT needles are scalpel-sharp and create an incision hole rather than a triangular hole in order to be less traumatic to the patient.

NEEDLES

Our sterile KT needles come in 2 sizes. The KT-1 is smaller for subgingival areas while the KT-2 is larger for the interproximal region (12 per pack).

Needle Type	Arms	Needle Length	Suture Length	Diameter (French sizing)	Needle Arc	Part Number
KT-2	Single	17.8mm	18"	4/0	3/8	975-0050
KT-1	Single	12.1mm	18"	5/0	3/8	975-0052
KT-2	Single	17.8mm	18"	5/0	3/8	975-0054
KT-1	Single	12.1mm	18"	6/0	3/8	975-0056

STRAIGHT

MICROSURGICAL SCISSORS

MICROSURGICAL FORCEPS

TWEEZERS, FORCEPS, SCISSORS AND  
NEEDLE HOLDERS

Our popular Castroviejo is a delicate instrument used to hold fine needles such as 5/0 & 6/0 during suturing. Easy to maneuver and lock.

Castroviejo Needle Holder 975-0006

Basic straight tweezers used to grab anything from gutta percha to cotton rolls.

Microsurgeal Tweezers – Straight 975-0002

Our Microsurgeal Scissors are a necessity for many applications, including cutting sutures.

Microsurgeal Scissors – Curved 975-0007  
Microsurgeal Scissors – Straight 975-0008

Long-necked, short-beaked forceps used to retrieve small objects from tight areas such as separated instruments deep into the canal.

Microsurgeal Forceps 975-0001

## RETREAT & RESTORE

SybronEndo has several innovative instruments to assist you with a retreat case. Combining patient comfort with rapid, predictable results, we believe these systems are the best on the market today.

RUDDLE POST REMOVAL SYSTEM AND ACCESSORIES 74

PERFORATION REPAIR 74

PEERLESS POST 75

# RETREAT & RESTORE

RUDDLE POST REMOVAL SYSTEM™

The Ruddle Post Removal System was designed by Dr. Clifford Ruddle to get out of sticky situations without root or tooth damage. The Post Removal System features 5 trephine sizes with matching taps that literally put the grip on the post. Once the threads have been created, the removal plier completes the job. The Ruddle System is designed to fully engage and remove even the most intransigent post while preserving surrounding dentition.

Ruddle Post Removal System	977-0030

WEST PERFORATION REPAIR

West Perforation Repair instruments are ideal for an incident in the upper third of the canal. Because the ends are paddle-like, they serve well as a carrier for both barrier and repair material. The paddles are flexible enough to allow placement of material flush with the canal wall.

W1-2 West Perforation Repair	974-0020
Large paddle for coronal 1/3 repair	
W3-4 West Perforation Repair	974-0021
Small paddle for coronal 1/3 repair and mid-root repair	

PEERLESSPOST™

PeerlessPost is a fully customizable fiber post. Adjustable on both ends, PeerlessPost provides a custom fit that is both esthetic and radiopaque.

- PeerlessPost has unique “keystone” links that are proven more retentive than other popular posts.\*
- PeerlessPosts exhibit a low elastic modulus similar to that of dentin, thereby decreasing the risk of root fractures.

\*Data on file, SybronEndo.

FOUR POSTS = SIXTY-FOUR OPTIONS

Each post has three 1 mm apical segments and four 1 mm coronal “keystone” segments that can be trimmed to custom fit each tooth for maximum contact and dentin conservation.\* With four PeerlessPost sizes available – each providing 16 options – you can choose among 64 different configuration possibilities.

PART NO.	DESCRIPTION	PART NO. CANADA & EUROPE
977-1000	PeerlessPost Kit	977-1040

977-1024	Post #4 – 1.0 mm .04 taper (10 pk)	977-1054

# PeerlessPost™

PeerlessPosts are tooth colored. They will not create dark show-through and will not require opaquer, or offset shading under ceramic crowns and bridges.

Unique “keystone” retention head prevents rotation or dislodgement.

PeerlessPost is made from non-galvanic, noncorroding fiber-reinforced composite. It is radiopaque to easily distinguish it from tooth, gutta percha and cement.

Tapered body section (.04 and .06) conserves dentin and maintains canal shape.

Adjustable coronal and apical ends allows for conservative post sizing.

Built-in undercuts increase surface area and improve retention.
