

Miratray[®] Implant

Implant Impression Tray with Foil Technology

**No customized tray
needed!**

- Ease of use (with patented foil technology)
- No individual fitting needed, abutments very visible through the foil
- Superior technique – allows tray repositioning with the precision of the “pick-up” technique.
- Saves time – eliminates additional patient visit
- Saves money – no customized tray needed
- Clean and precise impression taking – no overflow of impression material at the abutments
- Available in three sizes each for maxilla and mandible, for dentulous and edentulous jaws
- Compatible with all impression materials and implant systems

The new impression tray with patented foil technology is a development of the team Prof. Dr. Spiekermann and Dr. Haselhuhn (University Aachen, Germany). An implant impression tray can be created in a matter of seconds with high-precision, cost savings and no laboratory needed.
