

Perfect impression-taking through a system of products

Specially matched product system for taking preliminary impressions, pick-up impressions, two-step putty-wash impressions and functional impressions. The materials are compatible and feature perfect consistencies as well as optimum final hardness.

Owing to its soft and supple initial consistency, **silaplast Futur** putty is very easily mixed – it also has a pleasant odour and flavour.

The hydrophilic wash material **silasoft** with **detailed reproduction**, exhibits excellent flow properties, remains firm in the impression and on the preparation yet flows to produce an extremely thin layer under pressure.
